TOP 250 COMPANY RESEARCH PRESENTMENT

My Dear Friends,

In 2019, there have been many political, economic and social developments in our country and all over the world that will shape our future. With the increasing protectionism policies, the lowest growth data of the last 10 years were recorded in global trade.

The economic stagnation, which also affected our country, was limited by the timely measures taken by our government and the support provided to our real sector. With the determination of our real sector and our belief in our country, the growth performance of 0.9% we achieved in the third quarter of the year was an indication that our country's economy is built on strong principals despite all the negativities.

In this difficult period, unlike other cities, Bursa has taken its share of internal and external developments thanks to its strong production and employment structure and its quality as an export base.

As Bursa Chamber of Commerce and Industry, we, on the one hand, continue working to realize both value-added productions, to increase export volume; to handle qualified transformation process in the urban economy effectively. Moreover, according to the belief "the stronger members we have, the stronger we are", we implemented support mechanisms that will breathe our sectors and provide solutions to their problems.

In the light of all these developments, we conducted the "23rd edition of "Top 250 Companies Research" this year; and this research is one of the most extensive field work in Bursa, one of the leading cities of Turkey that effects economy positively.

Because of the changes on national and international

demand balance; financial stability and growth rate, many of our companies experienced a performance decrease compared to previous years, especially in profitability and added value.

But thankfully our companies never lost faith in our city and our country. Thanks to their production capabilities, export volumes and the employment opportunities that they provide, I congratulate once again on this occasion all our member companies that have given great sacrifice to support our country to reach its development goals. Because as we say, "Bursa Grows, Turkey grows"

The extraordinary processes we went through once again demonstrated the need for us to rapidly implement structural reforms, to increase our ability for adapting changes, to make our private sector companies financially competitive, and more importantly, to strengthen our economy while increasing domestic and national production capacities.

Increasing the implementation of the support provided to companies that offer production and employment in machinery, textile, automotive and construction sectors, and etc.; is crucial for handling unemployment problems, interest rates and inflation for Turkey.

As Bursa Chamber of Commerce and Industry, we will continue to guide all our companies and support our development goals with our projects that contribute to our country's sustainable and strong growth vision.

On this occasion, we hope that the "Top 250 Companies Research" we have prepared will be beneficial; I wish you convenience in your work and abundance in your earnings.

İbrahim BURKAY

BTO Chairman of the Board.

While I hope the research will be beneficial for all parties, I would like to express my gratitude to everyone who contributed to the preparation of the data.

TOP 250 LARGEST COMPANIES RESEARCH OVERVIEW

Bursa's First 250 Large Firms Research;

This study was carried out for the twenty third time in order to determine the large companies of Bursa in terms of their turnover.

This study was conducted throughout the city of Bursa, and the companies in the districts were also included in the survey.

In the ranking among the companies that participated and answered the survey, the data of the companies included in the Top 250 Large Firms were evaluated.

Out of these 250 companies, 217 are registered with the Bursa Chamber of Commerce and Industry, and 33 with the chambers of commerce and The industry in the districts of Bursa.

The first 250 Large Firms rankings are based on their net sales in 2019. These firms are ranked separately among themselves according to their value added, equity, total assets, pre-tax period profits / losses, exports, employees with wages, sales from production and EBITDA.

In the survey study conducted to determine the first 250 Large Firms, the net sales amounts in 2019, the amount of sales from production, exports, salaries and wages paid to employees, interests paid, rents and profits / losses before tax of 2019, 2019 total assets, equity, average number of people employed by salary in 2019, Analyzes were made by calculating EBITDA data. The information obtained through the survey has been checked from the companies' balance sheets and income statements.

In the study, 250 firms;

- Net sales, 164 billion 858 million 226 thousand 900 Turkish Liras
- Added value, 25 billion 318 million 499 thousand 18 Turkish Liras
- Shareholders' equity, 40 billion 805 million 963 thousand 676 Turkish Liras,
- Assets, 116 billion 131 million 284 thousand 220 Turkish Liras,
- Pre-tax period profits / losses, 8 billion 865 million 539 thousand 410 Turkish Liras,
- EBITDA (profit / loss before interest, depreciation and tax), 14 billion 726 million 36 thousand 992 Turkish Liras,
- Exports, 11 billion 521 million 829 thousand 976 Dollars,
- Wage earnersss, 151 thousand 741 people,
- Sales from production were realized as 118 billion 444 million 954 thousand 567 Turkish Liras.

Among the companies in the ranking, 67 are automotive sub-industry, 50 textile, 26 food, agriculture and livestock, 22 retail trade, 16 machinery and

equipment, 14 metal, 8 ready-to-wear, 6 ' of wood forest products and furniture, 6 of plastic, 4 of cement soil products and mining, 4 of energy, 4 of services training and consultancy, 4 construction, 4 chemistry, 4 automotive main industry, 3 environment and recycling, 2 economic relations and finance, 2 logistics, 2 tourism, 1 electrical-electronics, 1 operates in the field of health.

A total of 67 companies in the ranking and operating in the automotive supply industry; net sales amount 27 billion 20 million Turkish Liras, value added 6 billion 428 million Turkish Liras, Equity 8 billion 863 million Turkish Liras, assets 19 billion 750 million Turkish Liras, pre-tax period profits / losses 2 billion 701 million Turkish Liras, EBITDA amount 3 billion 226 million Turkish Liras, exports 1.6 billion dollars, paid employees 38 thousand 744 lts, sales from person and production are calculated as 22 billion 537 million Turkish Liras.

Total of 50 companies operating in the textile field in the ranking; net sales amount 15 billion 643 million Turkish Liras, value added 3 billion 283 million Turkish Liras, equity 6 billion 673 million Turkish Liras, assets 15 billion 985 million Turkish Liras, pre-tax period profits / losses 1 billion 111 million Turkish Liras, EBITDA amounts 1 billion 930 million Turkish Liras, 590 million dollars exports, 24 thousand 254 wage earnersss and 11 billion 422 million Turkish Liras from production.

The total of 26 companies operating in the field of food, agriculture and livestock in the ranking; net sales amounts 18 billion 6 million Turkish Liras, value added 3 billion 200 million Turkish Liras, equity 5 billion 132 million Turkish Liras, assets 13 billion 526 million Turkish Liras, pre-tax period profits / losses 1 billion 38 million Turkish Liras, EBITDA amounts 1 billion 894 million Turkish Liras, exports 274 million dollars, wage earnersss 20 thousand 326 people, production sales 14 billion 217 million Turkish Liras.

The total of the 22 companies in the ranking and operating in the field of retail trade; net sales amount 6 billion 525 million Turkish Liras, value added 1 billion 80 million Turkish Liras, equity 948 million Turkish Liras, assets 3 billion 229 million Turkish Liras, pre-tax period profits / losses 274 million Turkish Liras, EBITDA amounts 539 million Turkish Liras , its exports are 31 million dollars, its wage earners are 9,492 people, and its sales from production are calculated as 68 million Turkish Liras.

The total of 16 companies operating in the field of machinery and equipment in the ranking; net sales amount 12 billion 281 million Turkish Liras, added value 2 billion 691 million Turkish Liras, equity 4 billion 25 million Turkish Liras, assets 9 billion 877 million Turkish Liras, pre-tax period profits / losses 542 million Turkish Liras, EBITDA amounts 1 Billion 310 million Turkish Liras, exports 1 billion 506 million dollars, wage earnersss 14 thousand 476 people and production sales are calculated as 8 billion 34 million Turkish Liras.

PROFITABILIT INDICATORS

5.8% Increase in the Number of Profitable Companies

When the pre-tax profit and loss totals of the companies participating in the first 250 Large Firms research are analyzed; In 2019, it was seen that 220 companies generated a total net profit of 9.77 billion Turkish Liras.

When the profit totals were compared, it was seen that the highest increase was experienced in 2017 compared to the previous year. The total profit of the companies, which increased by 40.8 percent in 2018, decreased slightly in 2019 and decreased by 0.5 percent.

220 Firms Ended the Fiscal Year with Profit

Considering the number of companies making profit, it is seen that the number of companies, which was 208 in 2018, increased by 5.8 percent and reached 220 companies in 2019. In addition, the number of companies that made a loss has also decreased, and the number of companies, which was 38 in 2018, decreased to 31.6 percent in 2019, and it was observed that there were 26 companies. The decline in the number of companies making losses shows that companies have a tendency to recover even under difficult conditions.

The evaluation of the total profit and loss for the year 2019 was carried out on 246 companies. Due to the fact that 4 companies in the study are included with branch data, their figures are not included in profitability evaluations.

PROFITABILITY

Years	Number of Profitable Firms	Variation in Percentage	Sum of Profit TL	Variation in Percentage
2009	212	8,7	1.635.262.670	6,4
2010	222	4,7	2.318.397.144	41,8
2011	203	-8,6	2.594.881.634	11,9
2012	222	9,4	3.114.941.938	20,0
2013	210	-5,4	2.936.287.571	-5,7
2014	220	4,8	3.826.394.836	30,3
2015	229	4,1	4.793.382.308	25,3
2016	211	-7,9	4.426.854.488	-7,6
2017	222	5,2	6.977.489.684	57,6
2018	208	-6,3	9.826.903.268	40,8
2019	220	5,8	9.774.450.196	-0,5

*The 12-month average dollar rate for 2019 was calculated as 5.67 TL.

*16 of the companies included in the list did not want their names to be disclosed.

PROFITABILITY RATIOS

Profitability ratios are an important analysis item since it is a ratio especially followed by investors, partners or other persons or people who are planning to become partners with companies. Profitability of sales, total asset profitability and equity profitability ratios were included within the scope of profitability ratio evaluations in the first 250 companies' research.

Profitability of Sales Decreased to 5.38%.

These ratios, which show the relationship between profit and sales, provide information about the net efficiency of business activities and the results of various management policies and decisions implemented.

When the profitability of the companies included in the first 250 Large Firms research is examined, it is seen that the sales profitability, which was 4.05 percent in 2009, increased over the years and reached the highest rate with 6.07 percent in 2018. It is seen that the sales profitability, which was 6.07 percent in 2018, was realized as 5.38 percent in 2019 with a decrease of 0.69 points.

t is seen that the financial fluctuations experienced in the economy in 2019 caused an increase in costs, thus causing a decrease in the profitability of sales.

PROFITABILITY OF SALES

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Period Profit / Loss (P.T) TL	1.369.562.925	1.819.658.766	2.340.202.531	2.741.925.597	2.465.933.963	3.424.562.760	4.793.382.308	4.426.854.488	6.977.489.684	9.000.956.662	8.865.539.410

Profitability of Sales = Period Profit / Loss (P.T) / Net Sales P.T:pre-tax

Profitability of Assests Remained Limited with 7.63%

Total assets indicate the total assets of a firm. Return on assets is calculated by the ratio of period profit (loss) to total assets. The high rate of return on assets reveals the profit created by the existing assets of the enterprises. When the asset profitability of the companies included in the first 250 Large Firms research is examined. It is observed that the return on assets, which was 5.28 percent in 2009, showed a positive increase over the years, and reached the highest level in 2018. It is seen that the return on assets, which was 8.85 percent in 2018, decreased by 1.22 points in 2019 to 7.63 percent. Difficult conditions experienced in domestic and foreign markets in 2019 limited the profits of businesses with their assets.

Return on Assets

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Period Profit/Loss (P.T) TL	1.369.562.925	1.819.658.766	2.340.202.531	2.741.925.597	2.465.933.963	3.424.562.760	4.793.382.308	4.426.854.488	6.977.489.684	9.000.956.662	8.865.539.410

Asset Profitability Ratio = Period Profit / Loss (P.T) / Total Assets

Return on Equity Decreased to 21.73%

Equity profitability shows how much profit companies make with the equity they put for their activities. Return on equity is a ratio that shows how profitable the firm is with the equity they use in financing its activities. If this ratio, which also shows the profitability of the partners, is higher than the return on assets, it is considered positive.

When the profitability of the companies included in the first 250 Large Firms research is examined, it is observed that the return on equity, which was 12.27 percent in 2009, displayed a positive increase over the years, and reached the highest level in 2017. It is seen that the return on equity, which was 26.11 percent in 2018, was realized as 21.73 percent with a decrease of 4.38 points in 2019. The decline experienced in 2019 shows that businesses earn less profit with their own funds and their equity efficiency decreases.

Return on Equity

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Period Profit/Loss (P.T) TL	1.369.562.925	1.819.658.766	2.340.202.531	2.741.925.597	2.465.933.963	3.424.562.760	4.793.382.308	4.426.854.488	6.977.489.684	9.000.956.662	8.865.539.410
Equity TL	11.159.232.372	11.119.031.044	13.575.669.592	15.260.772.268	16.433.904.921	17.715.542.200	20.120.633.623	20.642.765.536	26.508.890.198	34.471.423.159	40.805.963.676

Return On Equity Ratio = Period Profit/loss (P.T) TL / Equity

PROFIT RATES OF THE SECTORS

Companies Provided The Most Profitability With Their Equity.

When the profitability of the sectors is examined in the Top 250 Large Firms study of 2019, the highest profitability rate is seen in the return on equity with 21.73 percent. The main reason for the profitability here is the high return on equity in the automotive main and sub-industry sectors and in the textile and ready-made clothing sectors. It is seen that the sales profitability of the companies in 2019 was 5.38 percent, and their return on assets was 7.63 percent.

Looking at the sales profitability in the first 250 Large Firms study, it is seen that the tourism sector has the highest sales profitability with 24.15 percent and the logistics sector is the second with 19.69 percent. It has been observed that the companies showing a negative trend are involved in the cement, soil products and mining and service, education and consultancy sectors.

It was seen that the sector that achieved the highest asset profitability in 2019 was the wood, forest products and furniture sector with 14.89 percent. As with the sales profitability, it was observed that tourism ranked second among the sectors with the highest return on assets, followed by the chemical sector with 14.33 percent. The lowest return on assets rate was minus 2.13 in the service, training and consultancy sector.

When the return on equity is examined, it is seen that the sector that provides the highest profitability is the automotive main industry with 37.75 percent. The logistics sector ranks second with 36.49 percent. The sector with the lowest return on equity is the service, training and consultancy sector with minus 3.62 percent.

SECTORAL PROFITABILITIES 2019 (%) VARIATION

EBITDA EVALUATIONS

EBITDA or its abbreviation in Turkish FAVÖK, EBITDA is a profitability calculation made on the basis of profit / loss before interest, depreciation and tax and shows the profit or loss obtained by companies from their main business.

In this context, EBITDA calculation has started to be included for the first time in the survey study of the first 250 companies in 2019. EBITDA ratio (the ratio of profit / loss created by companies before interest, depreciation and tax to net sales) is one of the most important financial ratios used in measuring the financial performance of companies.

As of 2019, the number of companies making profit before interest, depreciation and tax was 232. The number of companies that made losses was 11 and 7 companies were not included in the calculation.

EBITDA Amounted to 14.8 Billion TL

The ratio of EBITDA size to net sales gives the ratio of EBITDA. The EBITDA size of the companies participating in the calculation in 2019 was calculated as 14.8 billion TL. In 2019, EBITDA / Net Sales (EBITDA ratio) was 8.9 percent. This ratio shows the effectiveness of the companies in their main business under challenging 2019 conditions.

EBITDA / Assets ratio was 12.7 percent in 2019. This ratio shows the profit / loss efficiency of the companies with their total assets and their main business. EBITDA / Equity ratio also shows the profit / loss efficiency of the companies from their main business with the total equity they have. In 2019, the EBITDA / Equity ratio was 36.1 percent. It was observed that firms achieved high EBITDA from their equity and core business.

The Most EBITDA Size was Seen in the Automotive Sector.

In 2019, the highest EBITDA size with 3.2 billion TL was experienced in the automotive sub-industry sector, followed by the automotive main industry sector. When looking at EBITDA sizes, the sectors are followed by machinery, equipment and metal with 2.5 billion TL, textile and ready-to-wear sector with 2.1 billion TL, and food, agriculture and livestock sector with 1.8 billion TL. The lowest EBITDA size was in the economic relations and finance sector.

OPERATING MARGIN EVALUATIONS

While considering the financial performance of firms, indicators such as profitability, sales volume, ability to use resources efficiently are analyzed with the help of different ratios. In this context, operating margins were discussed in order to evaluate the profitability performance of the companies included in the Top 250 study and to examine the variables between sectors.

Operating margin is calculated as the difference between the firm's gross sales profit or loss and operating expenses. Operating margin is the real cash- generating power of the firm and it is the profit figure that shows the earnings of the firm from its activities.

Operating margin ratio is calculated by dividing operating margin by net sales. It shows the extent to which the firm generates profit from its main activities and what percentage of its net sales it generates from its main activities. The rising trend of the ratio is interpreted in favor of the companies.

When the sectoral operating margin rates of the companies ranked in the first 250 Large Firms study were examined, it was observed that the logistics sector had the highest operating margin with 28.2 percent and the tourism sector took the second place with 20.9 percent.

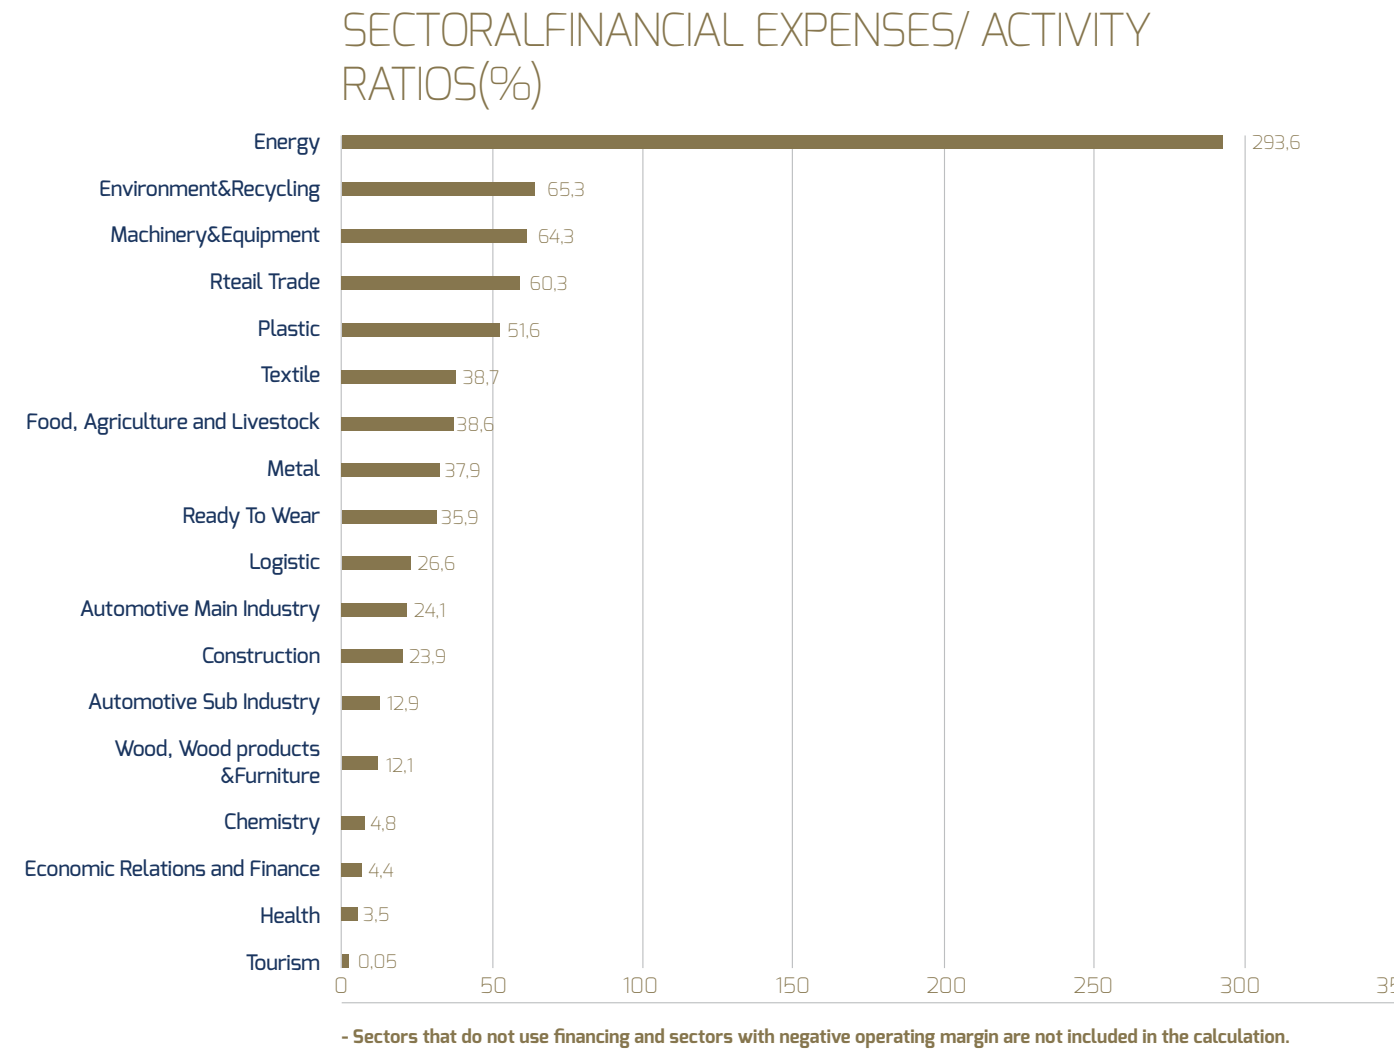

FINANCIAL EXPENSE EVALUATIONS

Another important indicator, one of the most used concepts in money markets, is financing. When the financing expenses of the companies included in the first 250 Large Firms study are examined, it is seen that the companies manage their activities using financing. The importance of using financing in carrying out activities in many sectors is remarkable.

In 2019, it was calculated how much of the companies provided with financing while carrying out their activities by dividing the financial expenses by the operating margin rates. Accordingly, it is remarkable that financing is mostly used in the energy sector. Another remarkable effect is that less financing costs are used in the realization of activities in sectors such as automobiles and textiles that contribute to the economy of Bursa.

While smaller sectors provide their income with financing, it is noticed that sectors where the number of enterprises are intense tend to provide their activities without using too much financing expenses.

Data on the relevant sectors are included in the general total.

Sales Shrank by 16.1 Percent in 2019

The domestic and foreign sales of the companies participating in the first 250 Large Firms research increased by 11.1 percent in 2019. Compared to the 27.2 percent increase in 2018, it was observed that the increase trend in domestic and foreign sales decreased by 16.1 points in 2019.

There are three important reasons for this decrease in 2019. First of all, it should be noted that the high rate of nominal increase in 2018 was supported by the jump in inflation and rapid increases in exchange rates. In 2019, the support of these two elements decreased.

Balancing policies were implemented in the economy in 2019. With these policies, domestic demand remained weak for most of the year. For this reason, the internal sales performance of 250 large companies was limited. Protectionism measures in global trade and the slowdown in the European market also negatively affected foreign demand and export opportunities were limited. Due to the slowdown in inflation and the increase in exchange rates in 2019, the nominal increase in the sales of 250 large companies was limited.

When we look at the main part of the panel, we see that 44 percent of domestic and foreign sales are comprised of automotive main and supplier industries. The growth rank rate of the automotive sector, which increased by 59.8 percent compared to the previous year, was recorded as 20.7 percent in 2019.

Value Added Decreased by 9.2 Percent in 2019

When we examine the last 3 years, it is seen that the total value added, which was 19 billion Turkish lira in 2017, increased by 33 percent in 2019 and reached the level of 25.3 billion Turkish lira, but when compared to 2018, there was a decrease of 9.2 percent.

Logistics and food, agriculture and livestock sectors are among the sectors that showed a significant increase compared to 2018. The food sector grew by 52.9 percent in 2019 against 0.8 percent growth rank in 2018. The logistics sector attracts attention with an increase of 403 percent among the value added growth rank compared to the previous year.

When we analyze the automotive main and supply industry sector, against the growth rank rate of 152 percent in 2018, the growth rank rate for 2019 was minus 32.2 percent. The main decrease was observed in the main industry.

The added value created by sectors and firms is the sum of the payments they make to production factors. Profit, fee, interest and lease payments are these payments. Companies faced difficult conditions in 2019. First of all, sales, the main element of profitability, were limited by the slowdown in domestic and foreign demand. Again, the intense competition inside and outside and the increases in production costs could not be reflected in the prices as much as needed and this negatively affected the profits. Difficulties were experienced in new employment. High interest costs, which were delayed from 2018, partially had a negative impact on profitability in 2019. When all these factors that create added value are evaluated together, the total added value created by Bursa's 250 companies remained below 2018.

Equity Growth Exceeds Net Asset Growth in 2019

Real growth rank was experienced in the equity capital of the companies participating in the first 250 Large Firms survey. Equity capital, which grew by 30 percent in 2018, increased by 18.4 percent in 2019, while it is seen that net assets grew by 14.2 percent in 2019. Equity growth rank exceeded net asset growth rank. Firms aimed to repair the deterioration on their financial structures in 2019 caused by the financial shock they experienced in 2018. Therefore, the primary goal in financial terms has been to improve the balance sheet structures and the debt / equity ratio. Firms thus provided their activities and growth rank in 2019 with more equity. Accordingly, equity capital grew faster than assets in 2019.

While the textile and machinery and equipment sectors were the first two sectors that recorded growth rank compared to the previous year, the equity growth rank rate of the automotive sector slowed down compared to the previous year. The sector's equity, which grew by 31.6 percent in 2018, grew by 31.6 percent in 2019.

While the net assets of the automotive main and sub-industry sector grew by 31.8 percent in 2019, it was executed as 46.2 percent in 2018. Net assets of the textile and energy sectors grew by 9.6 percent and 6.2 percent, respectively, in 2019.

Profits for the Period Decreased in 2019

In 2019, there was a real decrease in the profits of the first 250 large companies. The period profit, which increased by 57.6 percent and 29.0 percent in 2017 and 2018, decreased by minus 1.5 points in 2019. Thus, after an improvement in profitability for two consecutive years, a slight decline was recorded in 2019.

Automotive sub-industry and textile sectors are among the sectors that declined compared to the previous year. The period profits of these sectors decreased by minus 4.0 percent and minus 15.2 percent compared to the previous year. The sectors that recorded the highest growth rank in profit for the period in 2019 were the automotive main industry (13.9 percent) and food and agriculture livestock (111.1 percent) sectors.

Export Continued to Slow Down in 2019

Exports, which increased by 11.3 percent and 0.6 percent in 2017 and 2018, declined by minus 8.6 percent in 2019. In 2019, 68.0 percent of total exports were executed by organizations operating in the automotive supply and main industry sectors.

When the performances of exports by main sectors are evaluated, automotive (main and supplier industry) exports decreased by minus 14.4 percent while machinery and equipment exports decreased by minus 3.5 percent.

Automotive sector exports contracted in 2019 due to the negative developments in the markets. First of all, protectionist measures experienced in global trade in 2019 slowed down trade. Automotive sector exports were also negatively affected indirectly. Although protectionist measures are not a direct party, they also caused a contraction in the EU market. Therefore, especially exports to the EU have decreased. In addition, the process of transition to new generation vehicles in the European automotive industry has accelerated. Therefore, there is an increase in demand for electric and hybrid vehicles on both production and demand sides. In this transition period, it is observed that there was a significant contraction in the European automotive market. This has negatively affected the automotive exports of Bursa.

Slowdown in Sales from Production

Production sales of the first 250 large companies grew by 10.5 percent compared to the previous year. We are seeing a clear slowdown against 31.1 percent in 2018.

In 2019, 56.0 percent of total sales were executed by organizations operating in the automotive main and sub-industry sectors.

When the performances of sales from production by main sectors are evaluated, automotive (main and supplier industry) sales grew by 23.3 percent in 2019 against a growth rank rate of 66.2 percent in 2018.

The same slowdown was observed in the exports of the textile industry. This sector, which grew by 60.3 percent in 2018, grew by 16.5 percent in 2019.

The sales of the food, agriculture and livestock sector from production continued to gRank steadily. The sector grew 36.5 percent and 34.1 percent in 2018 and 2019, respectively.

ADDED VALUE = INTEREST + RENT + PROFIT / LOSS FOR THE PERIOD (P.T)
+ FEE PAID TO EMPLOYEES

2009-2019 TOP250 COMPANIES NET SALES TOTAL

When we examine the last 10 years, their total turnover, which was 21.7 billion dollars in 2009, increased by 33 percent in 2019 and reached approximately 29 billion dollars.

The total turnover obtained from the sales figures of the first 250 companies fell after 2008, the year of the global economic crisis, and reached pre-crisis figures again in 2010. The total turnover, which decreased in 2015 and 2016, increased in 2017 and 2018, and in 2019, the turnover of the company decreased to 29 billion dollars due to the fluctuations in the exchange rate.

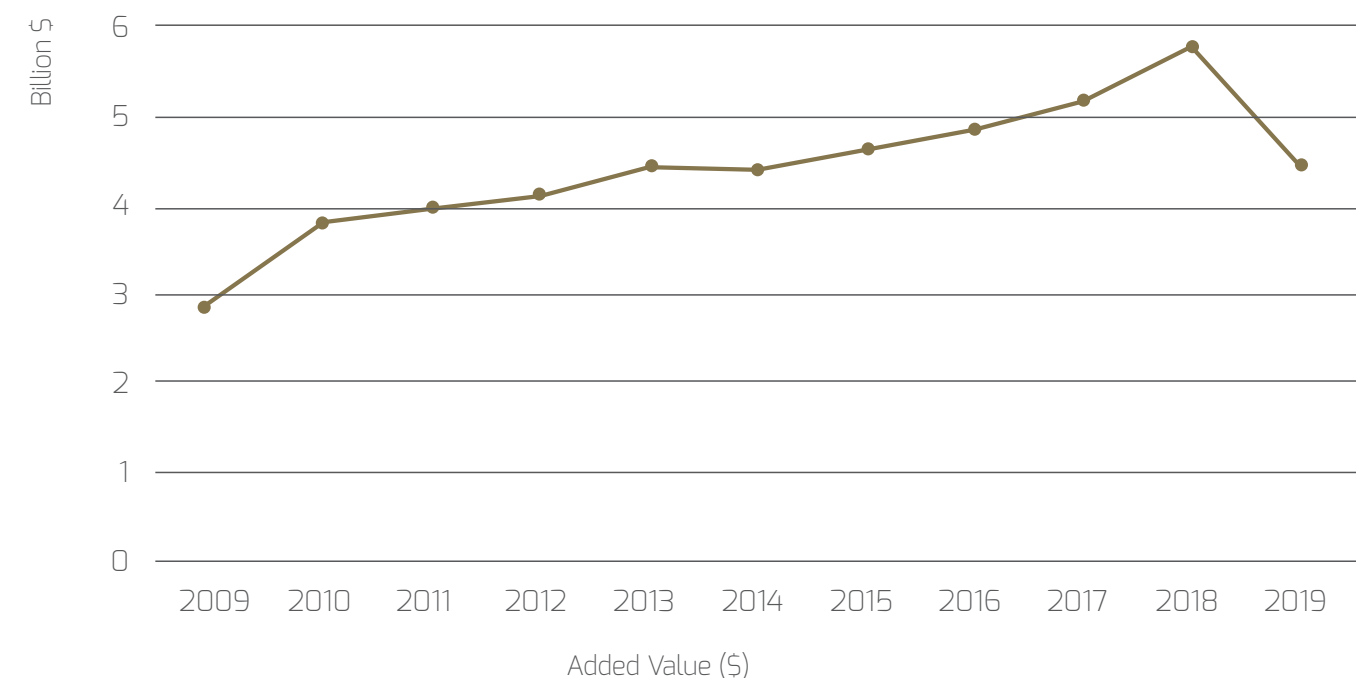

2009-2019 TOTAL ADDED VALUE OF THE TOP 250 COMPANIES

When we examine the last 10 years, the total value added, which was 2.8 billion dollars in 2009, increased by 55.7 percent in 2019 and reached the level of 4.4 billion dollars.

Value added figures consisting of the sum of wages paid to employees, interest and rental income and profit / loss before tax are of great importance especially for Bursa's economy.

Although the value added figures continued to increase between 2009 and 2018, except for minor fluctuations, it decreased by 21.4 percent in 2019 and reached 4.4 billion dollars.

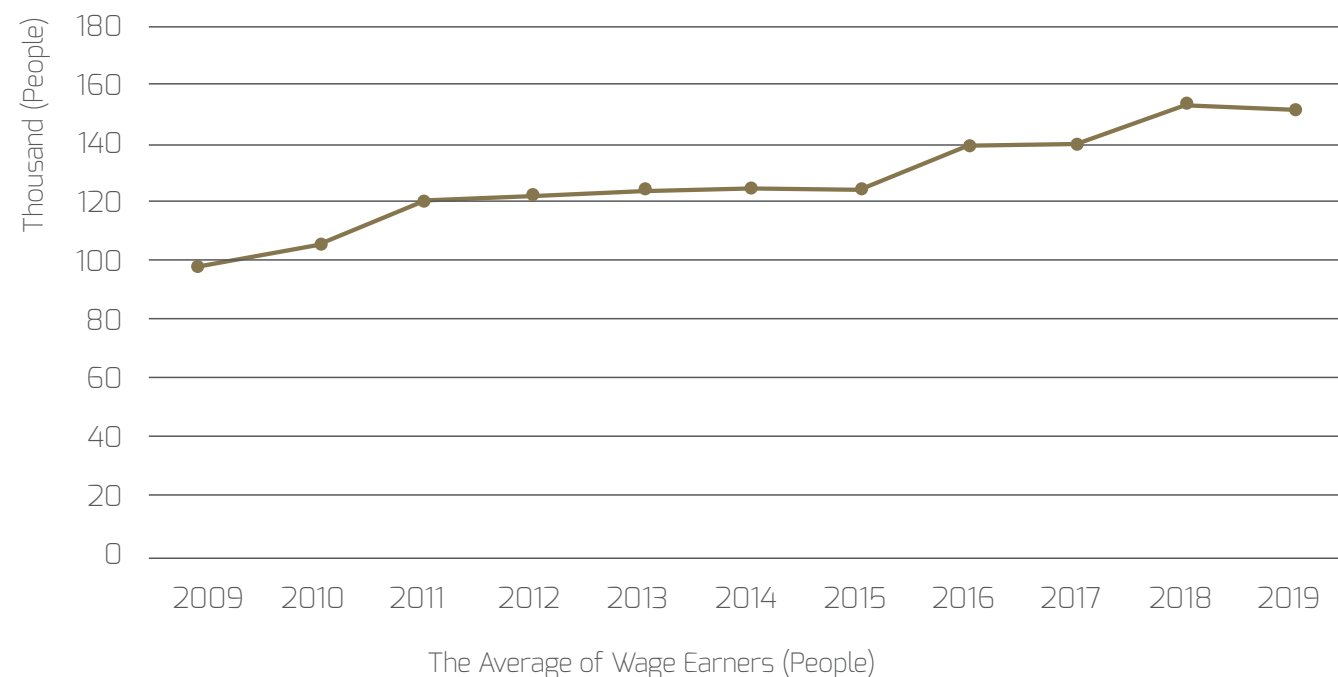

2009-2019 AVERAGE OF EMPLOYEES FOR THE FIRST 250 COMPANIES (PEOPLE)

When we examine the last 10 years, the total of employees with a wage of about 97 thousand in 2009 increased by 57 percent in 2019, reaching approximately 151 thousand people.

The total wage earners of the first 250 firms have shown an increasing trend since 2009. The highest increase was in 2011 with 15 percent.

The number of wage earners increased by 9 percent in 2018 compared to the previous year, and decreased by 1 percent in 2019.

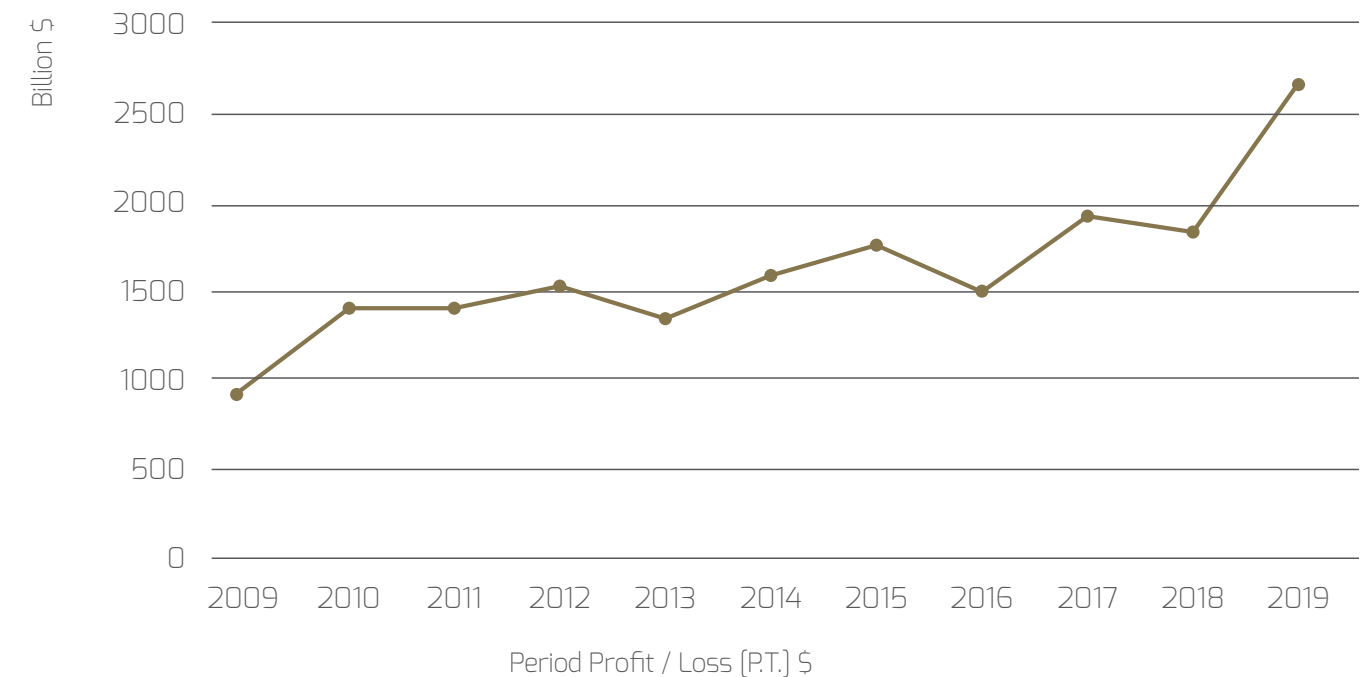

Despite the increase in the number of employees compared to the last ten years, a decline was observed in 2019 and employment was executed as 151 thousand people.

2009-2019 TOTAL PROFIT/ LOSS (P.T) FOR THE FIRST 250 COMPANIES

When we examine the last 10 years, the total profit, which was 881 million dollars in 2009, increased by more than 194 percent in 2019 and reached the level of 2.5 billion dollars.

While the profit totals of the first 250 companies increased by 59 percent in 2010, the highest profitability was executed in 2019 with 41 percent after 2010, although it decreased mainly in the following years.

1997-2019 NET SALES BY SECTORS

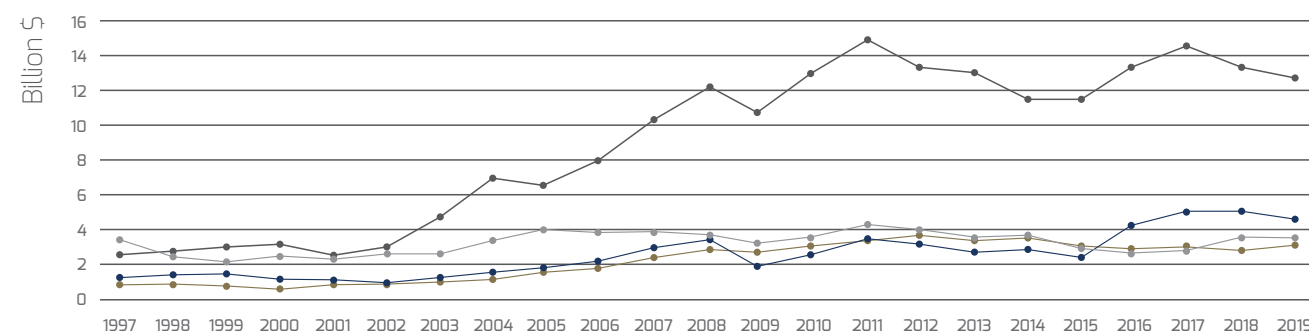

When the first 250 companies are examined by sectors, the automotive main and sub-industry sector has shown a significant increase performance especially after 2002 and was executed at the level of 12.9 billion dollars in 2019.

The turnover of the textile and ready-to-wear sector continued in the same course compared to the previous year and reached a turnover of 3.3 billion dollars.

The turnover of the machinery, equipment and metal industry decreased by 10 percent compared to the previous year, and its turnover was 4.3 billion dollars.

The turnover of the food, agriculture and livestock sector has fluctuated since 2015, and the turnover in 2019 was around 3.1 billion dollars.

When the total turnovers of the sectors are analyzed in dollar terms, the turnover is around 23.8 billion dollars. The sector that increased its turnover the most compared to last year; Food, agriculture and livestock sector increased by 11.6 percent.

● Food, Agriculture and Livestock ● Machinery, Equipment and Metal ● Automotive Main and Sub Industry ● Textile and Ready-to-Wear

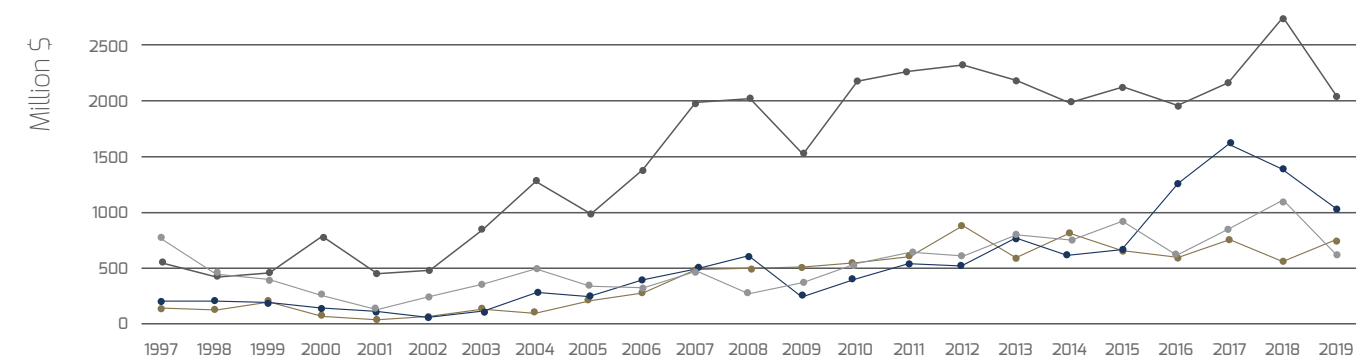

1997-2019 ADDED VALUES BY SECTORS

When the total value added is considered, it is seen that the highest increase among the four sectors is in the food, agriculture and livestock sector. The sector earned 32.1 percent compared to the previous year and reached an added value of 564 million dollars.

The textile and ready-to-wear sector was the sector that showed the highest added value with 25 percent in 2018, and the sector that showed the highest decrease in added value by decreasing to 634 million dollars in 2019.

In 2018, the highest added value was achieved in the automotive main and supplier industry, reaching \$ 2.1 billion in 2018. In 2019, it was observed that it decreased by 24.2 dollars to 1.6 billion dollars. In the machinery, equipment and metal sectors, the added value of 2019 decreased by 24 percent and reached 782 million dollars.

When the total value added dollar ore of the sectors is analyzed, it is seen that 3.6 billion dollars have been consumed.

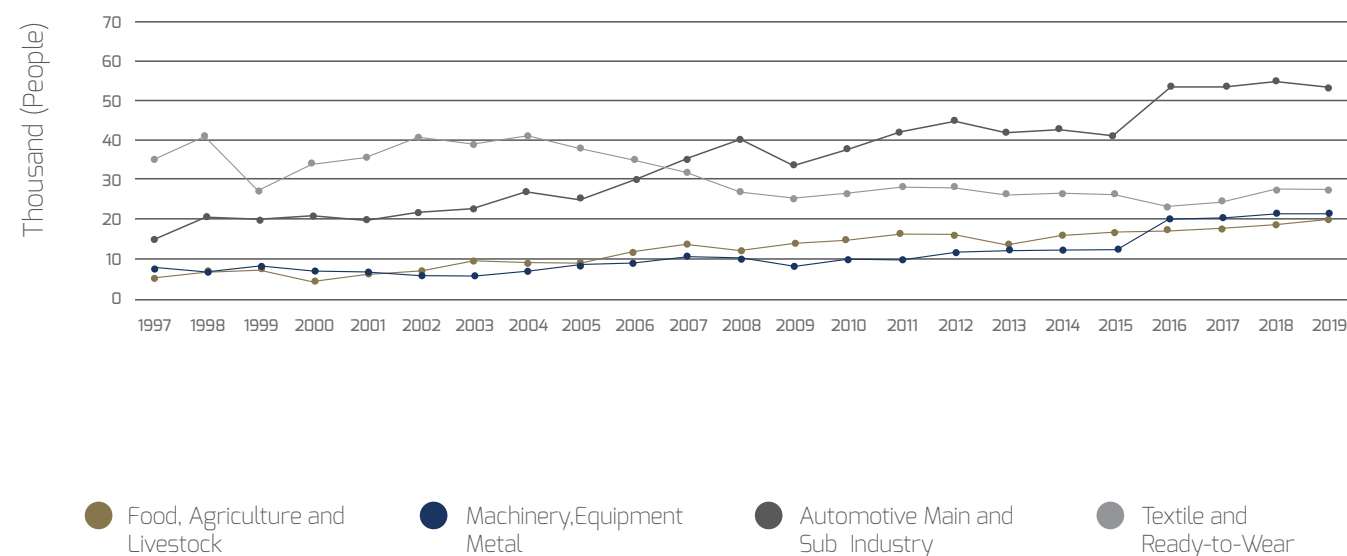

● Food, Agriculture and Livestock ● Machinery, Equipment and Metal ● Automotive Main and Sub Industry ● Textile and Ready-to-Wear

1997-2019 Average of Wage Earners by Sector (People)

When the employment figures of the first 250 companies are examined; Among the four sectors, the most remarkable was in the food, agriculture and livestock sector. The sector has reached 20,326 people in 8.2 percent capital cities. In 2019, declines were observed in machinery, equipment and metal, textile and ready-to-wear, and automotive main and sub-industry sectors.

While the first 250 companies in Bursa employed a total of 127 thousand people in 2015, this figure reached 138 thousand in 2016, 139 thousand in 2017, and 152 thousand in 2018, and it was observed that it decreased to 123 thousand in 2019.

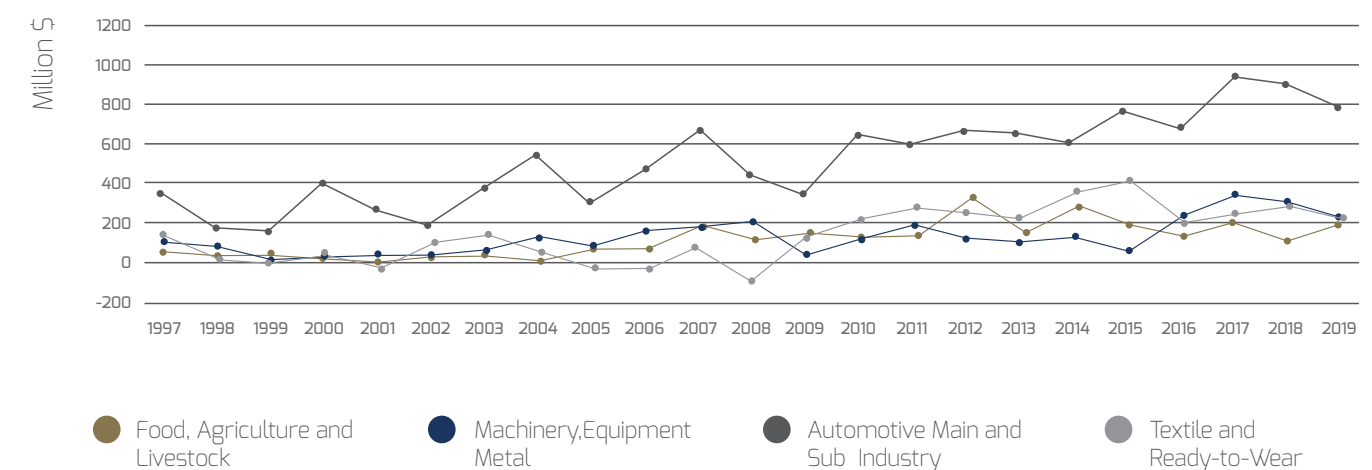

1997-2019 Period Profit / Loss by Sectors (P.T.)

The total profit figure, which followed a fluctuating course among all basic indicators, varied over the years due to various factors. When the data realized among selected sectors are analyzed, it is observed that the indicator with the highest increase is the profits before tax.

Considering the financial conditions that occurred in 2016, the increase in exchange rates and financing expenses negatively affected the profitability performance of companies. In 2019, only the food, agriculture and livestock sector increased and reached \$ 183 million by providing an increase of 82.5 percent.

It has been observed that the profitability in the food, agriculture and livestock, machinery, equipment and metal, textile and ready-made clothing sectors gradually declined. In 2019, it was seen that the biggest decrease in profitability among the three sectors was in the machinery, equipment and metal sector.

When the total profitability values of the sectors are analyzed in dollar terms, it is seen that it is realized at the level of 1.3 billion dollars.

The World Economy Slowed Down in 2019

Growth rank in the world economy in 2019 slowed down significantly and executed as 2.9 percent. Growth rank in the world economy started to lose momentum in the second half of 2018. Loss of momentum turned into a slowdown in 2019. Three factors led to the slowdown in the global economy. The first element has been protectionist measures emerging in global trade. While protectionism in trade increased throughout the year, it also expanded into areas such as technology, investments and intellectual property rights. Uncertainty regarding Great Britain's exit from the European Union continued throughout the year and the knot was resolved in December. Political polarizations-sanctions-geopolitical developments negatively affected economic activities in many geographies in 2019.

The slowdown in the economy in 2019 had a negative impact on supply-side Growth rank. Protectionism in global trade has largely been applied to industrial products. Therefore, uncertainties regarding the supply-demand balance for industrial goods arose, capacity utilization rates in industry decreased and industrial production lost momentum. Accordingly, new industrial investments have slowed down.

Due to the increase in protectionist measures applied in global trade in 2019, world commodity trade contracted in 2019 in terms of value and amount. Trade protectionist measures between the US and China have increased mutually throughout the year, negatively affecting global trade until the first agreement in December. Due to this development, world commodity trade contracted by 3.0 percent in

value in 2019 and decreased to 18.35 trillion dollars. In terms of quantity, it decreased by 0.1 percent in 2019. In developed countries, inflation in 2019 was again below the targets and remained relatively low. In the world economy, the targeted inflation in developed countries could not be reached in 2019 due to both the weakening of demand and the decreases in commodity, energy and goods prices due to the commercial protectionist tendency.

All developed countries entered 2019 with normalization targets for tightening monetary policies of central banks. However, as protectionist measures in global trade gradually turned into a war and the world economy started to lose momentum rapidly, major central banks had to return to expansionary monetary policies as of July. The US central bank FED stopped the downsizing of the balance sheet and cut the interest rates. The European Central Bank has also announced a new monetary expansion program. Other central banks also cut interest rates in the second half of the year.

Global industrial performance lost momentum throughout 2019. Commercial protectionism, Brexit uncertainty and geopolitical tensions, which led to a loss of momentum in the world economy, also negatively affected industrial production. Until the last months of the year, the global industry lost momentum. In December, with the US-China trade agreement and the end of Brexit uncertainty, industrial performance signaled a recovery and closed the year at a positive level.

Turkey Economy Was Affected by Balanced Policy in Economics in 2019

Turkey's economy, the 2019, has entered in 2018 and the impact of financial shocks experienced by the impact of the measures taken in the economy. As a result of the financial shock in 2018, the Turkish lira depreciated significantly and inflation and interest rates rose sharply. For this reason, a tight fiscal and monetary policy has started in the economy. The impact of tightening policies was experienced a lot in 2019.

Non-economic factors affecting 2019 were local elections, foreign policy relations and Syria-focused geopolitical developments that created uncertainty in the first half of the year. These factors both negatively affected expectations and put pressure on financial indicators throughout the year.

Another important factor affecting the economy in 2019 is that from the beginning of the second half of the year, developed countries' central banks, especially the USA, have returned to expansionary monetary policies. Thus, the pressure on the Turkish lira decreased and supporting conditions have also been created for the TC. Central Bank's interest rate cuts.

Turkey's economy in 2019 due to tight monetary policy in the economy has gRankn by 0.9 percent. The economy contracted in the first two quarters of the year. In the second half of the year, with the formation of more favorable conditions, the economy entered a Growth rank process again. However, some economic activities such as industry closed the year with a contraction. National income has decreased from 797 billion dollars to 761 billion dollars.

T.C. Central Bank maintained its tight monetary policy in the first half of the year and the policy rate remained at 24 percent. As of July, T.C. Central Bank has started to cut interest rates. At the end of the year, the policy interest rate fell to 12 percent. Accordingly, other interest rates also decreased. Turkey's credit swap risk premium has fallen 240 points until the end of the year. The Turkish lira continued to depreciate in the first half of 2019, and stabilized in the second half of the year.

658 thousand jobs were lost in 2019. Consequently, the unemployment rate has increased and executed as 13.7 percent. The number of unemployed has also reached 4.5 million. As a result of the tight monetary policy implemented in the economy, consumer prices were reduced to 11.84 percent annually. The increase in producer prices was 7.36 percent.

In 2019, with the slowdown in the economy and the increase in foreign exvariation rates, the foreign trade deficit was positively affected and the deficit decreased by 45.4 percent to 29.5 billion dollars. As a result of the rapid contraction in the foreign trade deficit and the increase in service revenues in 2019, the current account balance yielded a surplus of \$ 8.8 billion after many years. Turkey's gross external debt decreased by 6.8 billion dollars in 2019 fell to \$ 436.9 billion, but its ratio to GDP increased to 57.4 percent.

The budget deficit in 2019 was above the expected level and was executed as 123.7 billion TL. The ratio of budget deficit to national income increased to 2.86 percent.

BASE INDICATORS OF TURKEY'S ECONOMY

Industrial Production Growth Percent	9,1	1,1	-0,6
Manufacturing Industry Capacity Utilization Rate Annual Average Percent	78,5	76,8	75,9
Fixed Equity Investments Growth Percent	8,3	-0,3	-12,4
Central Bank Average Funding Interest Year-End Percentage	12,75	25,50	11,47
Cart Exchange Turkish Lira Year-End	4,16	5,67	6,18
TL Commercial Loan Interest Rate Year-End Percent	17,00	27,04	12,02

The industrial sector contracted by 0.6 percent in 2019. Industrial production declined in 2019, especially due to the weakness of domestic demand. Domestic demand started to contribute to industrial production in the last quarter of the year. In 2019, the increase in exports continued, especially in terms of quantity. However, the increase in exports could not compensate for the losses in domestic demand. Thus, after 2010, the industrial sector production contracted for the first time.

Financial conditions were relatively more favorable in 2019. The tight monetary policy implemented as the main element of the balancing policies in the economy, the decline in inflation and the subsequent fall in interest rates improved the financial conditions

in the second half of the year.

Again, the return of central banks to expansionary monetary policies on a global scale eased the pressure on the currencies of developing countries. Access to international finance has increased and its costs have decreased.

Conditions in the world economy have been more challenging for sectors and BCCI companies in 2019. In the challenging economic conditions in the second half while Turkey has become more promoters, in the first half. Our BTSO Top 250 Large Firms 2019 evaluation is made taking into account these improved conditions.

CONDITIONS OF 2019 LIMITED THE PERFORMANCES OF TOP 250 COMPANIES

With world demand and growth in Turkey's economy, financial stability and financial possibilities of developments in the areas of company performance in 2019 was generally likely to restrain. In particular, the slowdown in both domestic and foreign demand limited the growth in sales. Relative improvement and stability in financial indicators positively affected the financial structures of firms. However, the costs and profits of companies continued to be adversely affected by the damages from the last year in 2019.

250 large companies faced more challenging internal and external conditions in 2019 compared to 2018. Accordingly, 2019 performances were limited. However, the indicators have experienced different effects. It exhibited a negative performance especially in terms of profitability and added value.

While the total domestic and foreign sales of top 250 companies grew by 27.2 percent in 2018, it increased by 11.1 percent in 2019. The net sales of top 250 firm production increased by 31.1 percent in 2018 and by 10.5 percent in 2019. Sales were negatively affected by the contraction in domestic and foreign demand in 2019. Especially the balancing policies implemented in the economy led to a contraction in domestic demand for most of the year. On the other hand, foreign demand, which contracted due to the trade wars, affected exports negatively. Accordingly, the sales of 250 companies could only increase as much as inflation in 2019.

While the added value created by the activities increased by 46.6 percent in 2018, it shrank by 9.1 percent

In 2019. There has been a significant decrease in value added over a long period of time. Profitability and the decline in profits were determinant in this decrease. Difficult business and external conditions led to a decline in the value added created by the decline in firms' profits.

The profits of the 250 large firms decreased nominally in 2019. Profit for the period increased by 29.0 percent in 2018 and decreased by 1.5 percent in 2019. Thus, after an improvement in profitability for two consecutive years, a slowdown was experienced again in 2019.

Despite the decline in profits, there was a growth in nominal and real terms in equity. The total equity, which grew 30.0 percent in 2018, increased by 18.4 percent in 2019. Net assets also grew by 14.3 percent. Equity growth exceeded net asset growth in 2019 as well.

Exports increased by 0.6 percent in 2018, this times it contracted by 8.6 percent. The exports of 250 companies were negatively affected especially by the global trade wars and the slowdown in European markets in 2019.

With the slowdown in domestic demand and exports, there was a 0.6 percent contraction in employment in 2019. Employment incentives have not been effective in increasing employment.

In 2019, BTSO 250 companies performed below 2018 in terms of financial indicators due to difficult conditions both inside and outside..

DEVELOPMENTS IN BASIC FINANCIAL INDICATORS OF BURSA 250 LARGEST COMPANIES

Basic Financial Indicators	2016/2017 Variation %	2017/2018 Variation %	2018/2019 Variation %
Total Sale	33,8	27,2	11,1
Sales from Production	39,0	31,1	10,5

Net Assets	23,0	25,4	14,3
Export	11,3	0,6	-8,6
Paid Employees	0,8	9,2	-0,6

ECONOMIC DEVELOPMENTS EFFECTED COMPANIES SECTORS

The sector distribution of 250 largest companies is also significantly affected by the developments in Turkey and the world economy. Accordingly, the changes in the number of companies within the sectors occurred more in 2019.

While the largest number of companies among the 250 large organizations continued to take place in the automotive sub-industry sector, the number of companies increased to 67. Despite the stagnation in domestic and foreign demand in the automotive sector, the number of automotive supplier industry companies increased. The number of companies in the main industry increased by 1 and reached 4. Despite the slowdown in the EU market and the decline in exports, the automotive industry performed well in 2019.

The textile industry continued to increase the number of companies in 2019 as well. In 2019, the number of textile companies increased by 2 more. The number of companies in the ready-made clothing industry did not change with 8. Both sectors performed better in 2019 despite the slowdown in the EU market in terms of exports.

The construction sector is one of the sectors most negatively affected by the developments in the economy in 2019. The construction sector has both shrunk and the financial structures of companies have deteriorated. Accordingly, 4 companies entered the first 250 in 2019 and 2 companies experienced a decrease.

Among the 250 large enterprises of Bursa, the number of companies in the machinery and equipment sector increased by 2 to 16 companies. The machinery industry has encountered with the contraction of investments in the country, so it has maintained its performance by focusing on exports.

Agriculture and livestock breeding and the food industry experienced the effects of slowdown in domestic demand and increases in food prices in 2019. In addition, the impact of the sharp increases in production costs in agriculture in 2018 continued in 2019. Accordingly, in 2019, the number of companies in 250 large organizations decreased by 2 to 26. With the stagnation in domestic demand and retail trade, the number of retail companies among 250 large companies decreased by 4 to 22 in 2019.

TOP 250 COMPANIES SECTORS

The number of companies in other sectors within the 250 large companies remained generally the same as the previous year or showed very limited changes. These sectors were less affected by internal and external conditions and their own dynamics were more prevalent.

THE PROFIT OF 250 LARGEST COMPANIES FROM THE MAIN BUSINESS DECREASED IN 2019

The profitability obtained from the main works has become an important indicator in measuring the financial performance of the companies.

EBITDA indicator shows the profit obtained by companies before interest payments, depreciation and tax payments. The ratio of EBITDA size to net sales gives the ratio of EBITDA. The high rate of this ratio indicates that the companies are more successful technically and financially in their main business.

In this respect, in the BT50 250 company study, the EBITDA sizes and net sales of the companies were combined and the average EBITDA rates of the sectors were calculated for 2019.

EBITDA rates of the sectors included in the BT50 250 declined significantly in 2019. With the high cost increases from 2018, the sectors entering 2019 could not reflect these cost increases in their sales prices in 2019. The first reason for this is the contraction in domestic demand with the balancing policies in the domestic economy. The second reason is the increasing competition in foreign markets with the shrinkage of global trade. In addition, price competition among companies that focus more on exports due to the domestic contraction also negatively affected the EBITDA data. The EBITDA ratio (to net sales) of the 250 large firms was 8.93 percent in 2019.

There are EBITDA rates of 11 sectors in the manufacturing industry. In 2019, the EBITDA ratio of 11 sectors decreased. The declines were higher in the automotive main industry, chemical industry, textile industry, wood and forestry products industry, metal industry and plastic industry.

Of the 11 sub-sectors in the manufacturing industry,

4 of the 250 companies had the lowest EBITDA ratio with the average rate of EBITDA of 0.33 in the cement and soil products industry.

The EBITDA ratio in the ready-to-wear industry continues to decline and remain below the general sector averages.

It is seen that the manufacturing industry sectors within Bursa 250 concentrate on their main business, but they could not get enough profitability from their main business due to the internal and external conditions that occurred in 2019.

The EBITDA ratio in the construction sector declined slightly in 2019. The sector faced significant difficulties in 2019 and profitability indicators were adversely affected. Despite this, the EBITDA ratio still held at a reasonable rate.

The energy sector also had a very troubled 2019 year. Costs in the sector have increased significantly and the price-cost balance has deteriorated. Accordingly, the EBITDA rates of the energy companies included in the BT50 250 decreased by half in 2019.

As a developing sector, the rate of EBITDA in the environment and recycling sector increased in 2019, but remained below the average.

The retail trade sector was positively affected by the recovery of domestic demand in the second half of 2019 and the relative stability achieved in inflation, interest rates and exchange rates. Profit margins are low in retail trade. In this respect, EBITDA rates are also below other sectors. Accordingly, the EBITDA rate is low in the retail sector, which is included in BT50 250, but it is a success that the rate continues to increase in 2019.

250 COMPANIES EBITDA INDICATORS

Sectors	EBITDA / NET Sales Percent 2019

The Effects of the Global Economic Slowdown were Felt in 2019

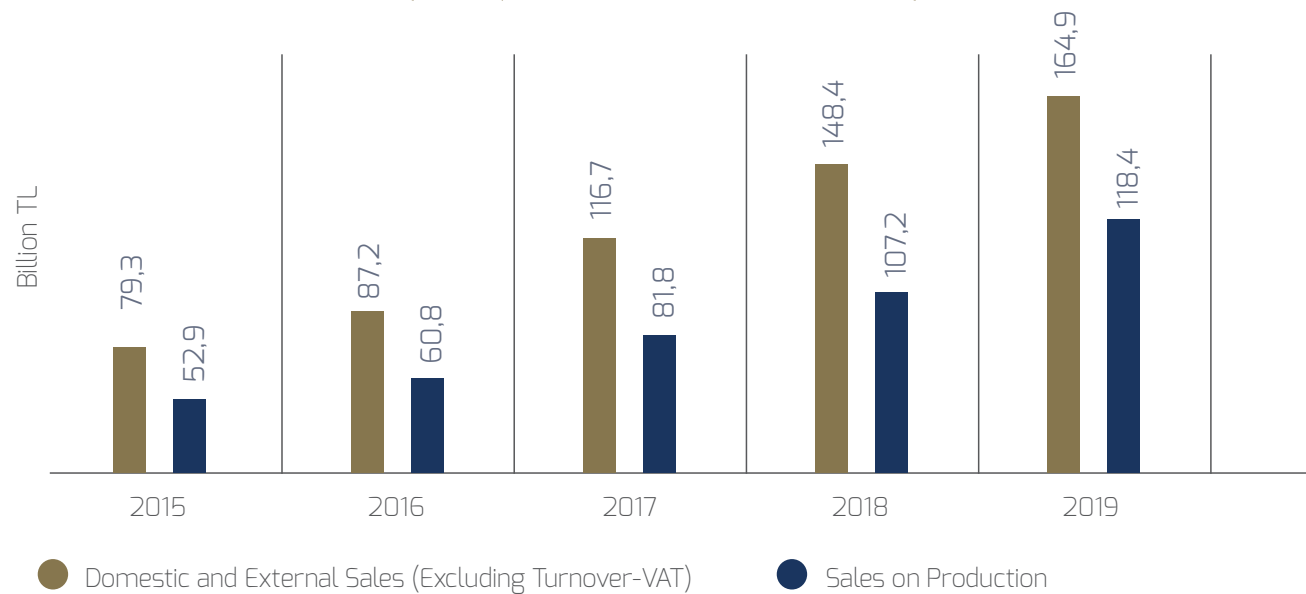

Bursa is one of the most important provinces for Turkey's economy has historically 4.2% of Turkey's GDP has a significant share. In 2019, it continued its performance by maintaining the same trend. When we look at the basic dynamics of the success of Bursa province, the positive contribution created by the export-oriented industry sector stands out.

Bursa province of the industrial sector as well as with high-tech-oriented products, as well as with Turkey's leading first technology platform Organized Industrial

Zone is also producing value-added products play a leading role.

In this study, it is seen that in 2019, the BTSO 250 companies were affected by global economic adversities. The added value created by prominent industries decreased by 10% compared to 2018. In 2019, even if the BTSO 250 companies increased their total sales, it remained below the average inflation and had a weaker year in terms of profitability compared to 2018.

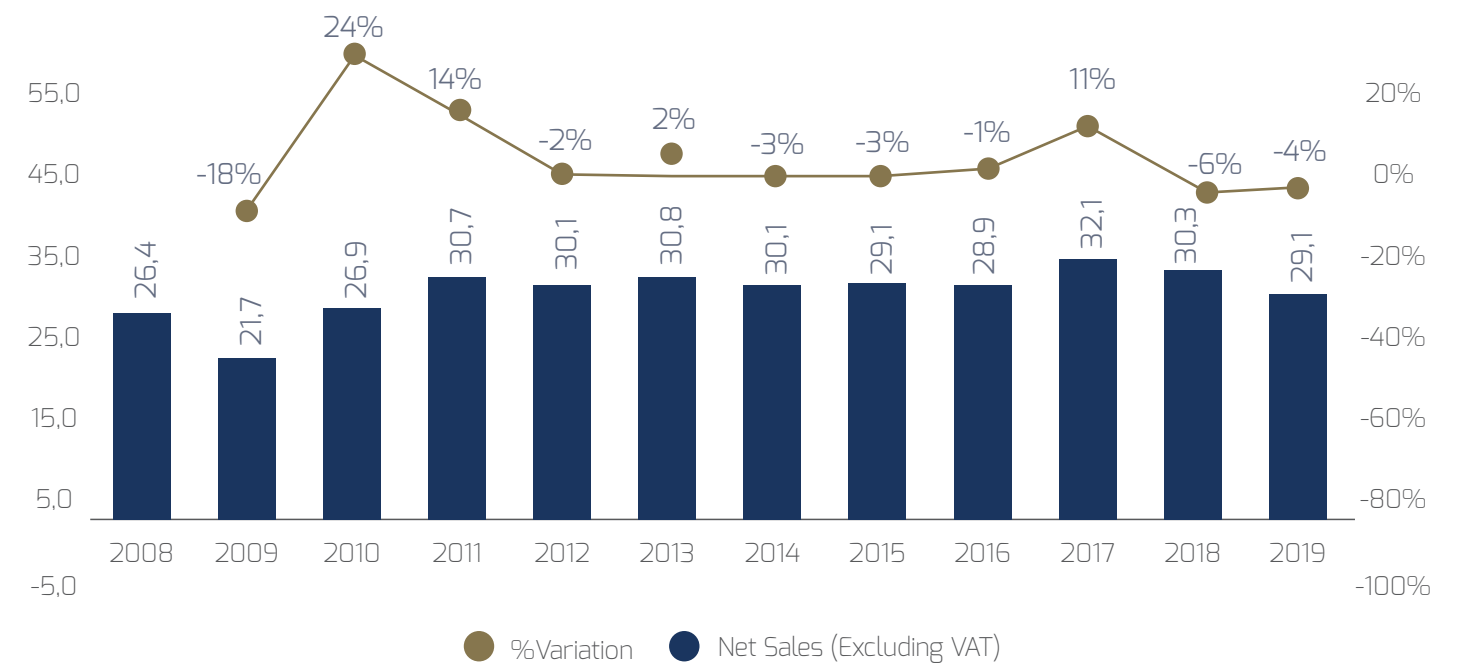

BTSO 250 Company Turnover Development

In the field of industry, Automotive Main and Sub-Industry, textile and ready-made clothing, machinery-equipment industry and metal industry have continued to be the prominent sectors in 2019 as in the past years. According to the data announced by the Bursa Chamber of Commerce and Industry, 250 companies with the highest turnover generated a total turnover of 164.9 billion TL from their operations in 2019. According to the turnover generated by BTSO 250 companies in 2018, a sales growth of 12% was achieved on TL basis.

As indicated in the chart, while sales have increased since 2015, the share of sales generated from production within sales has increased with an increasing trend. The share of sales from production among the sales of 250 companies with the highest turnover in 2019 remained stable compared to 2018 and is 72%.

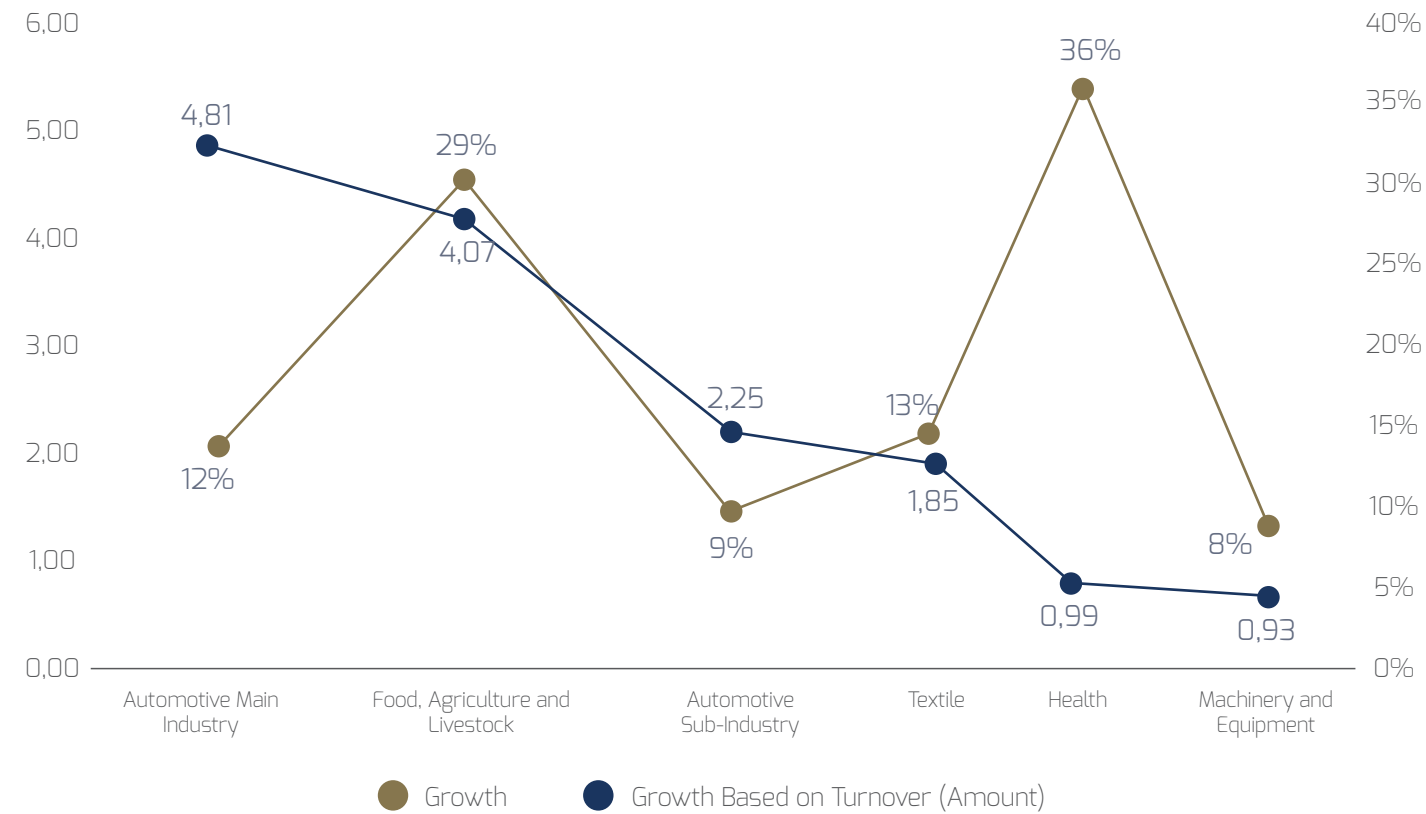

Net Sales (Excluding VAT-Billion \$)

When we examine the sales trends in USD, we see that the sales in 2019 were realized 4% below the sales in 2018 and it was the same as in 2015

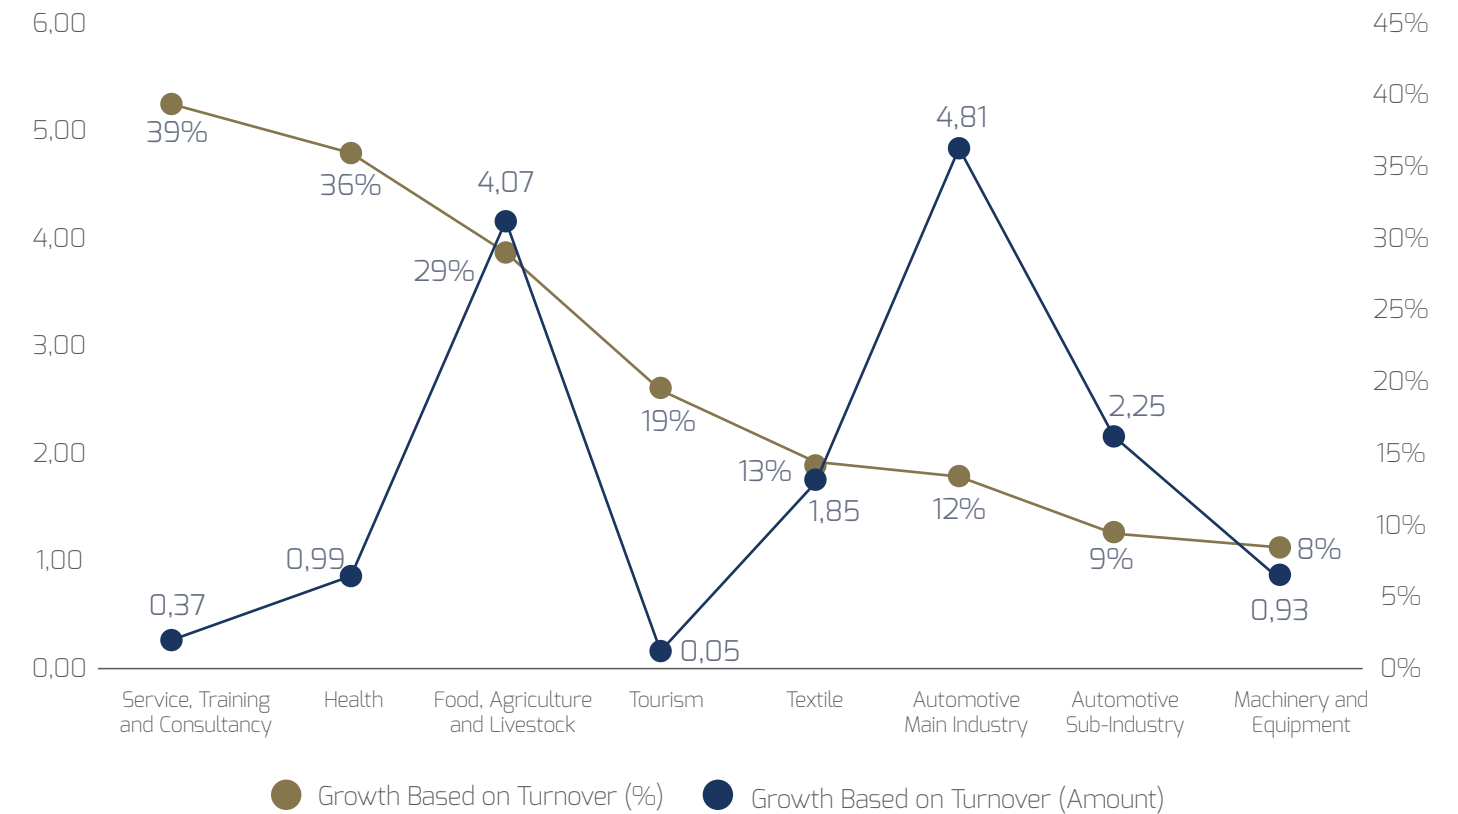

Sectors with the Highest Growth in Turnover (Amount)

When we examine the sectors that increased their turnover the most in 2019, we see the sectors that have the highest share from the economy of our Bursa province.. These sectors continue their performance over the years.

Automotive and automotive supplier industry, Textile, Machinery and Equipment, Food, Agriculture and Livestock sector plays an important role in Bursa, Turkey to get 4.2% share of the economy.

Most Growing Sectors Based on Turnover (%)

Although agriculture is in the second plan in sectorial terms, Bursa is a province with high potential for the agricultural sector with its fertile lands and human resources. Bursa represents the Marmara Region as one of the 7 selected regions after the recent revitalization and consolidation project of the Ministry of Agriculture. Bursa will play a more active role in agriculture in the coming years and the contribution of the agricultural sector will continue to increase.

According to the projection we prepared as Besfin, we anticipate that the agricultural sector will grow by 3-4% at the end of 2020 while the Services, Construction and Industry sectors will shrink.

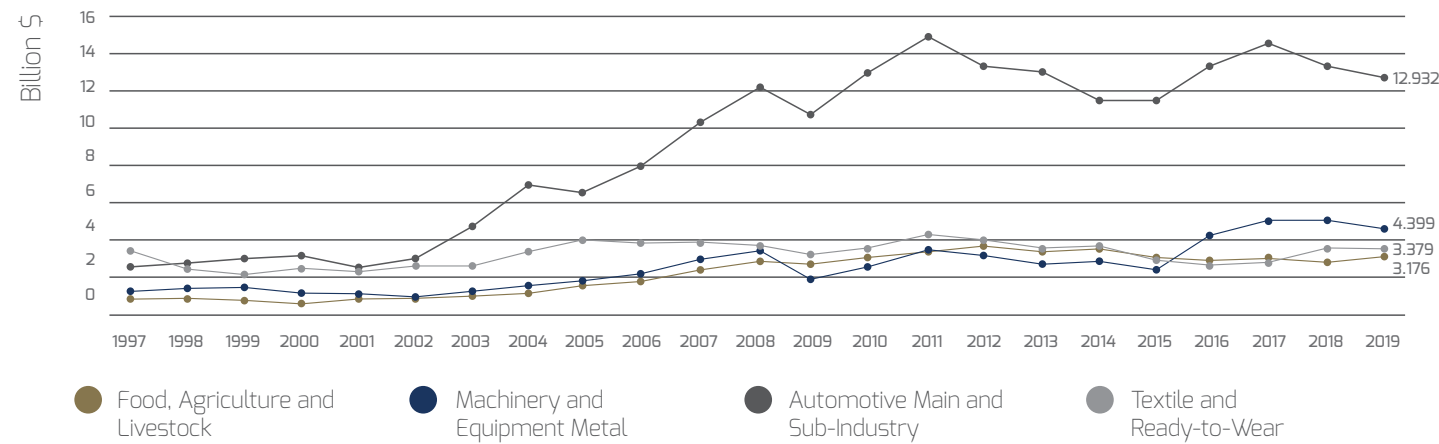

This projection confirms our 2020 Q2 figures. When we compare the first 250 companies operating in Bursa province on the basis of 4 main sectors, the annual turnover values of 2018-2019;

- 29% of the Food Agriculture Livestock sector,
- 8% of the Machinery, Equipment and Metals sector,
- 10% of Automotive Primary and Spare Parts Industry
- 13% of the textile and ready-to-wear sector

Growth can be seen.

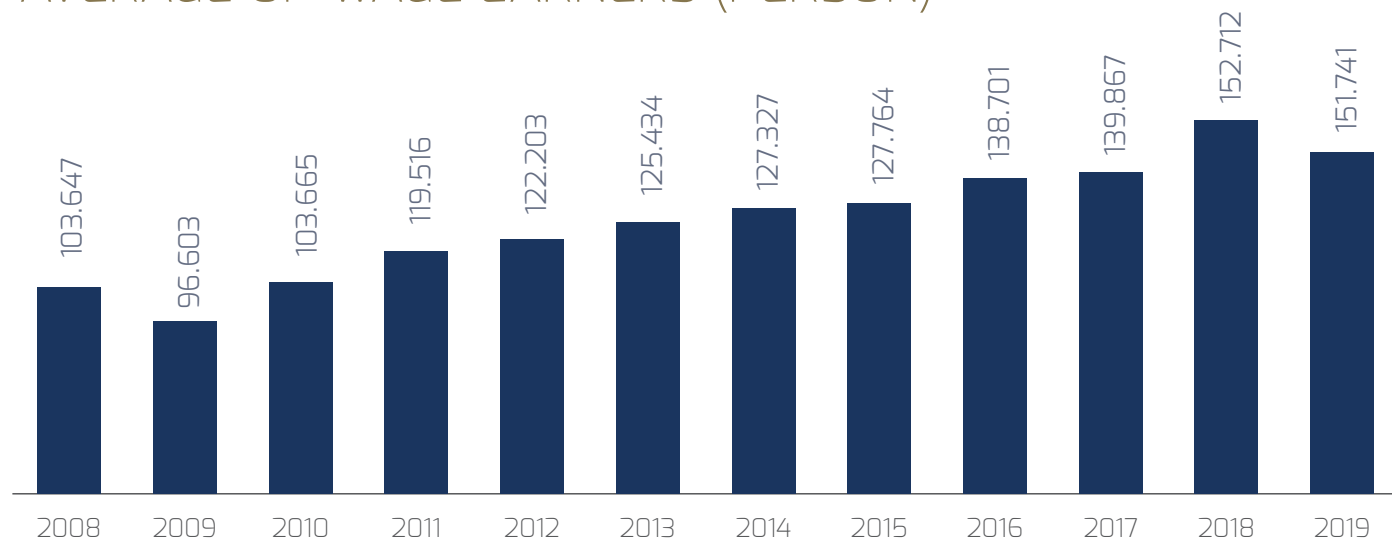

NET SALES BY SECTORS, 1997-2019

As indicated in the chart above, it shows the development of the locomotive sectors of Bursa's economy over net sales between 1997-2019.

Especially when looking at the last 5 years, it is in a decreasing trend after 2015, especially after the machinery and equipment peaked in 2017. Food and Textile is in a horizontal position. The automotive main and sub-industry sector follows a downward trend in USD basis in 2019.

AVERAGE OF WAGE EARNERS (PERSON)

When looking at sales, it is a very important indicator of the employment created by these companies. When we look at this point, there is a decrease of 971 people in 2019 compared to 2018 according to the graph of the average number of people working on wages.

PERFORMANCE ANALYSIS

Ratios	Equity / Net Assets	Net Active Turnover Speed	Equity Turnover	Net Asset Profitability (ROA)	Return on Equity (ROE)	Sales Profitability
2017	33%	144%	%495	9%	26,3%	6%
2018	34%	146%	%487	9%	26,0%	6%
2019	35%	142%	%404	8%	21,7%	5%

While doing the BTSO 250 Study, we worked on the years of 2017, 2018 and 2019.. When we analyze it in terms of assets, it is seen that the asset sizes of companies decreased by 3% in 2019 compared to 2018 and the asset turnover rate was realized as 142%.. Active Turnover Rate shows that companies work more efficiently and use their resources more efficiently. return on assets and return on equity show that a company is profitable compared to and as much as its total assets Return on assets and return on equity were 8% and 22%, respectively, in 2019. The share of equity in the assets was realized at the level of 33% -35%.

When we look at the companies in BTSO 250 companies, 220 companies made a profit in 2019.

While a profit of 9.6 billion TL was announced, the overall net profit margin of the companies was realized at 5%

in 2019 and decreased by 50 basis points compared to 2018.

When we examine companies by sectors in terms of net profit rate, the top 5 sectors are Tourism 24%, Logistics 20%, Chemistry 12%, 10% Automotive Sub-Industry and finally 9% Wood, Forest Products and Furniture.

Even if the profitability of the locomotive sectors that play a role in Bursa's economy is lower than other sectors, the profit margin of the Food, Agriculture and Livestock sector in 2017, 2018 and 2019 is 6%, Machinery and Equipment 5%, Automotive main and sub-industry 6% and Textilin net profit margin% 7 level. The Food, Agriculture and Livestock sector, which draws the most attention in this table, has increased its profit margin compared to 2018. The net profit margin of other sectors has decreased compared to 2018.

Profit / Net Sales	Food, Agriculture and Livestock	Machinery, Equipment and Metal	Automotive Main and Sub-Industry	Textile and Ready To Wear
2017	6%	7%	7%	8%
2018	4%	6%	7%	8%
2019	6%	5%	6%	7%

SECTORAL PROFITABILITIES 2019 (%) VARIATIONS

TOTAL	25.318.499.018

When we examine the added value created by BT50 250 companies in 2019, a total of 25.3 billion TL was created.

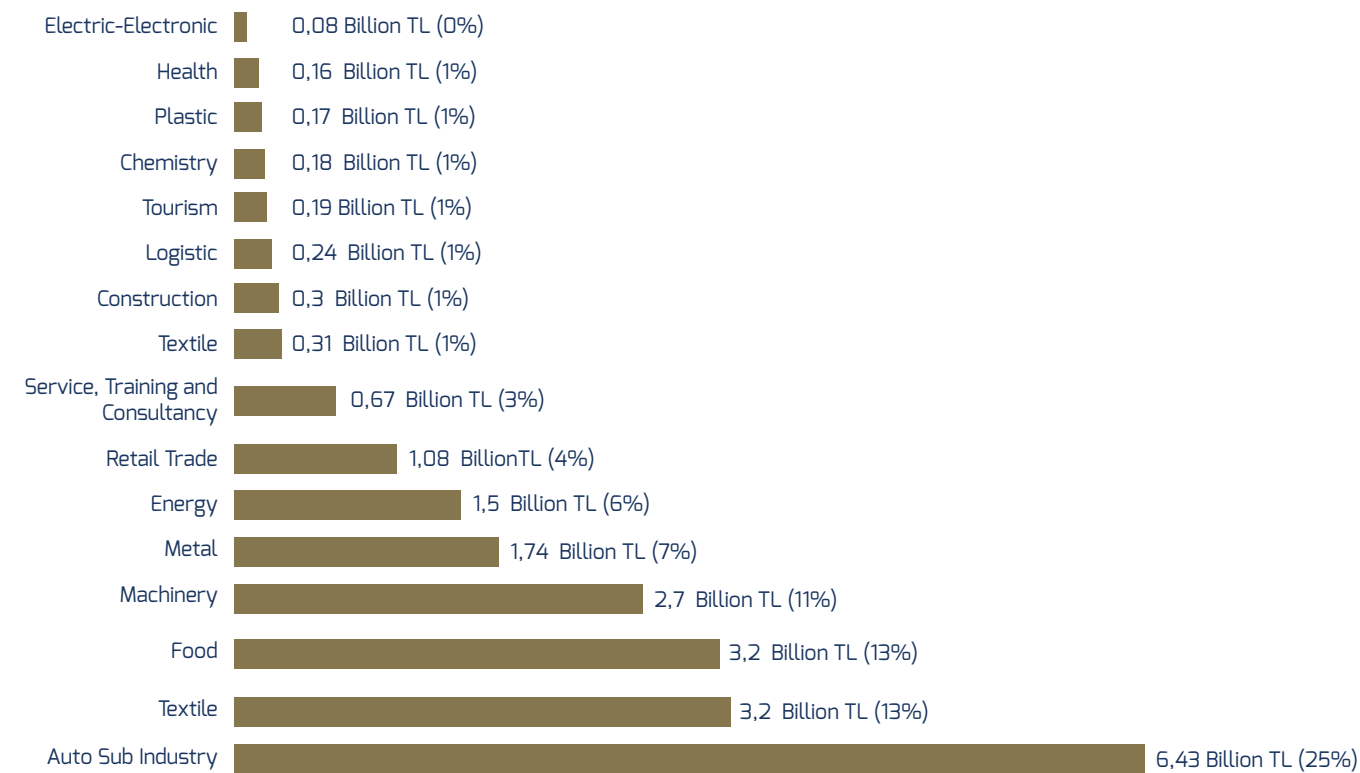

When we examine it as a sectorial; the sectors that create the most added values are the leading sectors in Bursa's economy;

- The share of the automotive supplier industry is 25%
- 13% of textile
- Share of Food, Agriculture and Livestock 13%
- Share of Machinery and Equipment 11%
- Metal's share is 7%.

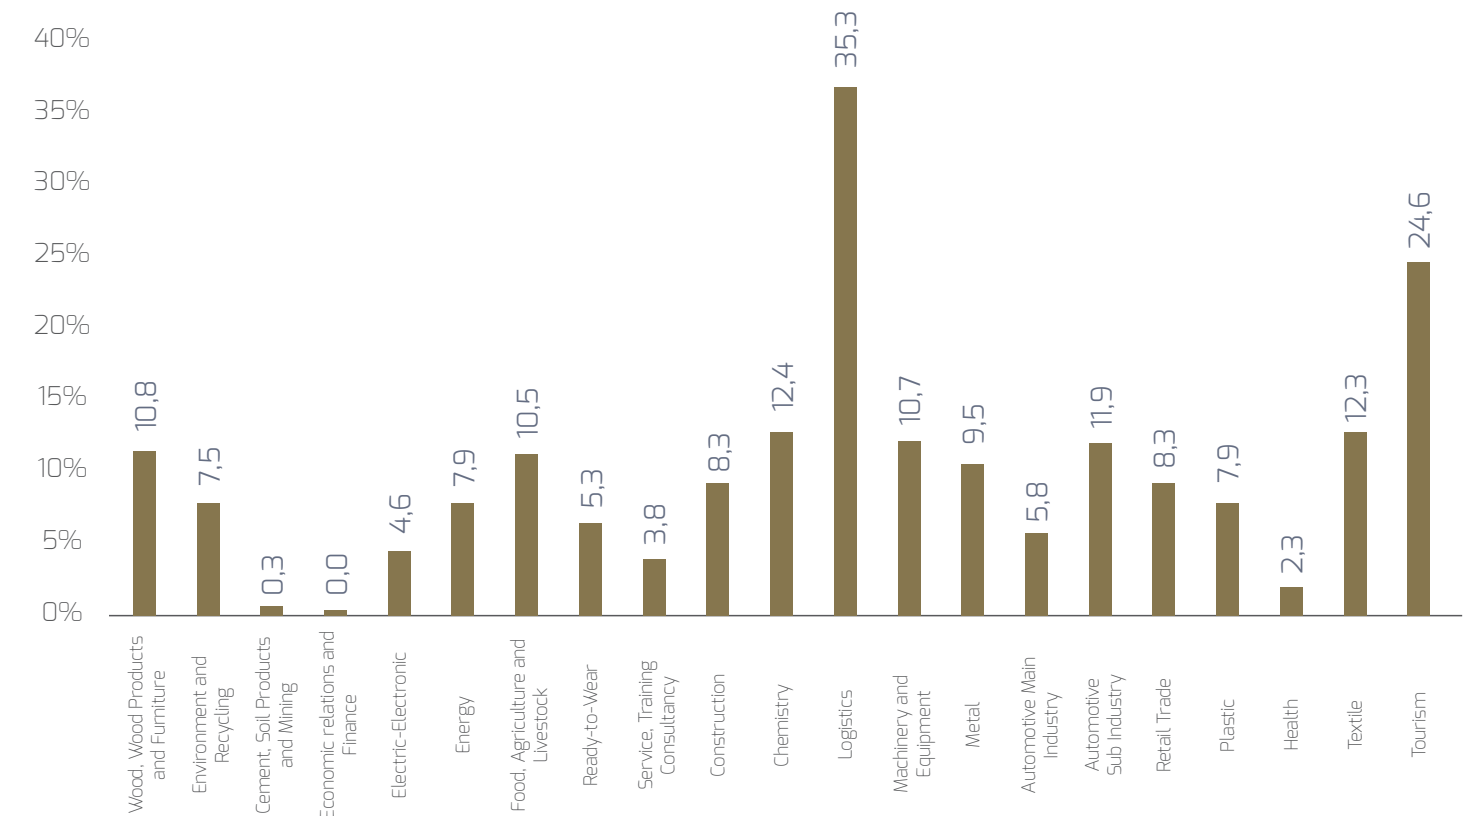

Sectors that do not want their data to be disclosed are not included in the table. Calculations are made by including general aggregation data.

ADDED VALUE

EBITDA MARGIN BY SECTORS (%)

When we look at the performance of our companies in terms of EBITDA, a total of 14.7 billion TL of EBITDA was created in 2019, and the ratio of EBITDA in total sales is 8.9%.

Logistics sector has the highest EBITDA margin with 35.3%, followed by the tourism sector with 24.6%. Chemistry sector is followed by 12.4%, Textile with 12.3% and automotive supplier industry with 11.9%.

In summary, Bursa 250 companies generated 164.8 billion TL net sales and 14.7 billion TL EBITDA in 2019.

The EBITDA margin is 8.9%. The active turnover rate in 2019 was 142%. The Asset Turnover and Share of Equity in the assets are also above the national average and are successful. 8.8 billion TL net profit and 11.5 billion dollars Exports are the numbers that differentiate Bursa.

In 2019, the Bursa economy was less affected by global economic difficulties as it dispersed market risks. If Turkey Bursa grow grows sentence; It is the most important element of sustainable growth. High value-added product production will be the focus of companies in the coming period.

Continuously Further BURSA

One of the most strategic cities of Turkey in Bursa. The advantage of geographical location, developed industrial infrastructure and compatible with the technology, production appetite, Bursa stepped forward with trained work force has become the leading force of Turkey's economy, draws attention to the position of exporting produce. The city, which was among the top 3 exporting cities with an export of 15 billion dollars last year, is also the address of value added investments. Finally, this success of Bursa, which made a name for itself with its Turkey's automobile (TOGG) investment, is of course not a coincidence

Automotive Home Base

Bursa with the mission of making Turkey's dream true has 4.17% share in total GDP. When we look at the turnover shares of Bursa's industrial companies in the total industrial production, the automotive industry stands out by far. It is useful to state the numbers more clearly. 51,2% of the total 982 thousand 642 cars produced in Turkey in 2019 ie 451 Total 503 thousand, 405 thousand 248 thousand trucks / vans of 107 thousand 327, 9199 527 buses were produced in Bursa. Most of the products produced were exported to all over the world, especially to Europe.

To Dreams

Exactly 60 years after the first car venture Devrim, Turkey's domestic electric automobile, adds an

additional layer of hope that will be produced in a pioneering cities like.

Bursa, which is proven to the world automotive industry. We are following the developments with enthusiasm and look forward to 2022, when the first mass production car will roll off the belt.

Address of Top 250 Companies

Although automotive is the leading sector in Bursa, many giant companies in the fields of textile, apparel, machinery, iron and steel, food, agriculture and livestock are also operating within the boundaries of this province and their contribution to the economy is undoubtedly significant. The 2019 results of the "Bursa Top 250 Large Firms Research" prepared by BT50 experts also support our findings.

5 New Companies Joined

While the total export of the first 250 companies in Bursa, where giant companies such as Renault, TOFAŞ, Bosch and Karsan operate, is 11.5 billion dollars, the share of automotive companies in this export is 69 percent, or 7.9 billion dollars. Machinery and equipment exports exceeded \$ 1.5 billion, while textile and apparel companies exceeded the \$ 1 billion export limit. Another remarkable detail is that the number of companies operating in many sectors has decreased compared to 2018, while five new companies have

started operations in the automotive main and supplier industry. This development strengthens Bursa's position as the center of automotive.

Does Not Fit Caps

Bursa is a city where business people can make courageous investment decisions and set great goals. With this feature, it is also the center of technological transformation. The most basic feature of entrepreneurs from 7 to 70 in Bursa is their attitude that does not fit into their caps. Eye of Bursa's will not settle down as long as entrepreneur keep seeking new markets beyond the borders of Turkey. 8 thousand 500-year history and the entrepreneurial

spirit of commerce that have committed themselves to the DNA of the city center and not just the economic value created by the sample is happening in the business world in Turkey with this identity.

Popular With It's Potential

Entegre sanayi ekosistemi, kalifiye personeli, sağlam altyapısı, endüstrideki yetkinliği ve katma değeri yüksek üretimiyle ihracat birim fiyatı Türkiye ortalamasının üzerinde olan Bursa, pandemi gibi hiç hesapta olmayan krizlerde dahi Türkiye'nin en az hasarla yoluna hızla devam etmesini sağlayacak potansiyeliyle her zaman yakından izlediğimiz bir şehir olmaya devam edecek.

Why Not!

When I received the results of Bursa First 250 Large Firms Research 2019, I first strained my memory. As we approached the end of 2020, I thought about what we were going through in 2019. 2019 was a difficult year. A year ago, in 2018, the US economy started to recover, followed by the European Union. The Federal Reserve also continued to raise interest rates and withdraw money from the market. China, the engine of growth, slowed down and could not prevent its growth, which was 10 percent for many years, from declining to 6.1 percent. As the world entered 2019 in foggy weather, it faced a completely different fear. Recession...

Trade wars, geopolitical risks, Brexit issue, and negative economic indicators from Europe etc. The weather got so bad that remember, central banks have returned to a loose monetary policy. The Fed decided to cut interest rates after 11 years and tried to feed the market. The European Central Bank followed him. After all, Turkey's Central Bank also lowered interest rates with other 40 countries. The Central Bank reduced the policy rate from 24 percent to 12 percent by reducing the total yearly by 1200 basis points.

These fluctuations in the world economy has also affected Turkey's economy in the first half of 2019. The shrink that started in the fourth quarter of 2018 continued in the first two quarters of 2019. As of the third quarter of 2019, recovery started and we were

Sefer LEVENT
Journalist - Writer

able to close the year with 0.5 percent growth. The dollar rate started the year at 5.29 TL, and when it ended 2019, it saw 5.95 TL. If we remember the global picture in 2019 and return to the research of the biggest 250 companies prepared by the Bursa Chamber of Commerce and Industry..

We see that reflected in Bursa in the world and inevitably these developments in Turkey's economy. However, Bursa is an important city that can write its own story.

Automotive main and spare industry, machinery equipment, textile and food are the first 4 sectors that give life to Bursa's economy. This picture has not changed for years. Apart from agriculture and food, the decrease in sales in the other three draws attention immediately. Value added rates in 3 main sectors with falling sales only caught two third of 2018.

The research reveals that Bursa experienced difficulties in both turnover and profitability in leading sectors in 2019. The positive picture in agriculture, food and livestock has also been reflected in the number of workers. While there was a slight decrease in workers in three main sectors, the average number of workers of companies dealing with agriculture, food and livestock increased from 18 thousand 785 to 20 thousand 326.

This table shows that the right jobs have been done in agriculture, food and animal husbandry. But is it enough? The biggest problem in Bursa and other big industrial cities has been the same for years ... The fact that we are talking about the main sectors and that we cannot add new ones to these main sectors.

Time Is Flowing Faster in the Economy. We have to change..

We have a competitive advantage in the defense industry with drones. We have a competitive advantage in the defense industry with UAVs and SiHAs. Our local car is counting the days to go on the asphalt. Is it enough, not enough!

We have to spread the production models that contain advanced technology and high rate of localization

to every field. For this, we must increase our R&D investments.

Artificial intelligence has become one of the most important issues in the world. The world is racing in this area. We must participate in this race, we must be in the front row. K The coronavirus and pandemic process has shown that health will continue to be at the top of the agenda in the coming years. Scientific and technological developments in health and biomedical fields should not only be followed by the public. Private sector investments are very important here.

In summary; Bursa, making history in the industry, can be the center of high technology with its vision, entrepreneurs and qualified workforce. Why not!

Şükrü ANDAÇ
Journalist - Writer

Let's Increase Added Value First, Then the Profitability

Two years have passed since we lost our beloved writer Güngör Uras, who is a veteran of business and business journalism, whose knowledge and modesty are admired by everyone who knows him. He was the first person to come to mind in the business and press when it comes to industry and production. Therefore, I would like to do the introduction with the words of our esteemed teacher.

"We do not have the chance to create a large production facility in every subject. But we have to grow in one or more sectors by determining our industrialization strategy. We can do this. If we achieve this, we can make competitive production based on research, development (R&D), and innovative technologies. Production means creating added value. Added value is the difference between the output price and input price of a good or service." (Milliyet; 2010)

In 2009, the value added created by the big companies in Bursa (BTSO 250) was 2.8 billion dollars; five years later, in 2014, this value increased to \$ 4 billion 381 million. In the next five years, the sales from production did not even remain constant and decreased from 30 billion to 29 billion dollars, while the resulting value added approached 4.5 billion dollars.

So how is the added value calculation done? Here (1) Nature, (2) Labor, (3) Capital, (4) Entrepreneur stands out. The added value created is shared as (1) Rent, (2) Wage, (3) Interest, (4) Profit.

Our teacher Güngör Uras always drew attention to this point:

"Reasonable profit is a sign of health in the economy. An enterprise that cannot make reasonable profit cannot survive and grow. New ones cannot be installed. In this case, unemployment and poverty increase."

Now let's come to the revenues and the profits obtained in return...

In 2009, in the BTSO 250 list, the sales revenue was 21.7 billion dollars; the profit for the period is 881 million dollars. Period profitability is 4 percent compared to sales revenue, that is, a very low level.

So what happened in the next years?

Let's keep reading the numbers from where we left.

Year 2010, in the BTSO 250 list, net sales reached 27 billion dollars, while profit for the period reached 1.4 billion dollars. Its proportional equivalent corresponds to 5 percent, in other words, a significant increase from 2009 to one year afterwards draws attention.

Let's continue.

Year 2011, 30.6 billion dollars net sales and 1.4 billion dollars profit for the period were realized. Despite the turnover increase of 3.6 billion dollars, the profit has

stagnated. Proportional calculation corresponds to 4.5 percent.

Year 2012, 1.5 billion dollars profit versus 30.1 billion dollars in sales, a 5 percent rate.

Year 2013, net sales of 30.8 billion dollars, profit for the period falling to 1.3 billion dollars. The ratio of sales to profitability is 4.5 percent.

Year 2014, profit of 1 billion 563 million dollars against net sales of 30 billion dollars. The rate is 5 percent.

Year 2015, the profit obtained for the period after net sales declined to 29.1 billion dollars, is 1 billion 762 million dollars. The rate is 6 percent.

Year 2016, the profit after net sales of 28.9 billion dollars is 1 billion 465 million dollars. Profitability rate

according to sales is 5 percent.

Year 2017, annual profit of 1.9 billion dollars versus 32 billion dollars in net sales. The rate is 6 percent.

Year 2018, net sales of 30.2 billion dollars and 1.8 billion dollars period profit. Rate is 6 percent.

Year 2019, after 29.1 billion dollars of annual sales revenue, 2.6 billion dollars of period profit was captured. The proportional equivalent of this corresponds close to 9 percent.

Our wish is first of all to increase the sales revenues of all Turkish industrialists, especially Bursa, the castle of industry; then to increase profitability. Increasing the added value must be the only indispensable condition in the industry.

Vahap MUNYAR
Journalist - Writer

Automotive Should Crown Its Success Increasing the Added Value

When some of the data of the "Bursa 250" research of the BURSA Chamber of Commerce and Industry (BTSO) reached me, I first looked at the course of the sectors.

In the first table, I saw "Net Sales by Sectors 1997-2019" and examined the situation of 4 sectors in 1997:

- Food, Agriculture and Livestock: 576 million 945 thousand dollars.
- Machinery, Equipment and Metal: 762 million 169 thousand dollars.
- Automotive Main and Supply Industry: 2 billion 539 million 50 thousand dollars.
- Textile and Readywear: 3 billion 462 million 288 thousand dollars.

According to these data, the photograph of the industry in Bursa in 1997 looked like this:

- Textile and Readywear are in the first place. Automotive main and sub-industry follows it. Food, agriculture and livestock are relatively lagging behind.
- Surely, I focused on the years from 1997 to 2019 one by one. Finally, the data for 2019 are as follows:
 - Food, Agriculture and Livestock: 3 billion 175 million 814 thousand dollars.
 - Machinery, Equipment and Metal: 4 billion 398 million 504 thousand dollars.
 - Automotive Main and Sub-Industry: 12 billion 931 million 712 thousand dollars.

- Textile and Ready-to-Wear: 3 billion 379 million 116 thousand dollars.

From the net sales section of the table in 2019, I deduced the following:

- Automotive Main and Supply Industry, which ranked second in 1997, has not only ranked first in the last 22-23 years, it has also significantly widened the gap.

While "Textile and Readywear" was the leader in the added value table in 1997, it immediately caught my attention that in 2019 the first place went to "Automotive Main and Supply Industry". Let's look at the 1997 ranking

- Textile and Readywear: 744 million 895 thousand dollars.
- Automotive Main and Supply Industry: 552 million 701 thousand dollars.
- Machinery, Equipment and Metal: 186 million 951 thousand dollars.
- Food, Agriculture and Livestock: 127 million 15 thousand dollars.

The ranking changed as follows in 2019:

- Automotive Main and Supply Industry: 1 billion 613 million 465 thousand dollars.
- Machinery, Equipment and Metal: 782 million 739

thousand dollars.

- Textile and Readywear: 634 million 362 thousand dollars.
- Food, Agriculture and Livestock: 564 million 382 thousand dollars.

The point that stuck in my mind about the change in the "Added Value" ranking was as follows:

- "Automotive Main and Supply Industry" has taken the leadership as well as net sales. However, the added value of 1.6 billion dollars from net sales of 12.9 billion dollars remained low. I think, this sector needs to provide Turkey with a higher added value.

Then I reviewed the "Average Number of Paid Employees", that is, the employment table. In 1997, "Textile and Readywear" was the leader in Bursa:

- Textile and Readywear: 35 thousand 386 people.
- Automotive Main and Supply Industry: 14 thousand 959 people.
- Machinery, Equipment and Metal: 7 thousand 266 people.

- Food, Agriculture and Livestock: 6 bin 090 people

In 2019, this employment ranking changed as follows:

- Automotive Main and Supply Industry: 54 thousand 772 people.
- Textile and Readywear: 26 thousand 674 people.
- Machinery and Equipment: 21 thousand 897 people.
- Food, Agriculture and Livestock: 20 thousand 326 people.

This table gave me the following message:

Production with robots gained importance in factories, that is, with the increase of "metal collar", "Automotive Main and Supply Industry" took the lead in employment.

Doesn't the increase in the added value created by the "Automotive Main and Subsidiary Industry", which has also been a leader in exports for years in Turkey, crown the sector in the championship?

Who Manages the Exchange Rate and Interest Well Has Won

In recent years, we have witnessed many different scenes of the economy.

For example, the first half of 2018 was enthusiastic and the second half was very quiet.

In the following year, trends shifted on a calendar basis. After the difficult first six months of 2019, it took on a very hopeful view!

And just as we said that things were getting better, we came across the corona test of 2020.

We are now witnessing tough movements on the basis of quarters, not semesters. As a result, 2020 is turning into a milestone with the wind of change it creates step by step!

In order to analyze this milestone point well, it is necessary to focus on 2019, which is the last year of the economy, which we can call relatively normal. Surely, by comparing it with previous years especially 2018.

We have already learned macro data for the country as a whole. However, we can learn the sector and company performances on the basis of provinces only through the researches of chambers. The 250 Large Companies Research of Bursa Chamber of Commerce and Industry, which has been a guide for many years, performs an important task in this context.

The latest research that has been prepared stands before us as the best lens that can be kept on the economic performance of Bursa which is the locomotive city of Turkey's economy on both micro and macro basis. First of all, it is useful to look at the list from a broader perspective, especially in terms of profitability and added value. For example, when we look at the 10-year summary, we can see the traces of mini crises in profitability data. During this period, the number of companies that declared profit 4 times, decreased.

We see a 3-year decrease in profit totals. The most striking contraction is seen in 2016 with 7.6 percent!

The fact that the total profits decreased by 0.5 percent with 9.77 billion TRY in 2019 compared to the previous year is actually an indicator of how the currency crisis that started in August 2018 and the increase in interest rates afterwards contracted the economy. The high increase of 40.8 percent in the total profit of Bursa companies in 2018 is rather the result of a financial advantage based on exchange rate and interest. Because the total net sales were around 148.4 billion TRY in 2018 and reached 164.9 billion TRY in 2019.

On the other hand, the total profits decreased from 9 billion TRY to 8.86 billion TRY in this period comparison. As a result, while the rate of profitability of sales was at its peak with 6.07 percent in 2018, it decreased to 5.38 percent in 2019.

To explain, the reflection of the exchange rate shock in 2018 on the TRY was reflected very strongly on the balance sheets. In 2019, despite the warmer exchange rates, there was a long erosion of high interest rates.

When we look at the profitability issue in terms of assets, we encounter a similar picture. The total return on assets of the 250 large companies in 2018 was at the level of 8.85 percent. When it comes to 2019, we encounter a rate of 7.63 percent.

The 21 percent level in return on equity says that the last year was not very good for companies. While the summary of this table states that 2019 was a worse year compared to the previous year, it is seen that companies and sectors working in exports and successfully managed financing came to the fore in these years marked by the changes in exchange rates and interest rates.

The reversal of the table when the data is evaluated in dollar terms is the proof of this situation! In 2019, the profitability before interest and depreciation manifests itself in sectors such as automotive main and supply industry, textile and readywear, food, agriculture and livestock, machinery, equipment and metals.

Traditional Sectors Ahead Again

Export performances predominantly determine the

biggest ones of Bursa. 4 automotive main industry companies appear to be the leading companies with total export revenues exceeding 6.2 billion dollars on a sectoral basis. Likewise, when the automotive supplier industry is added to this table with 1.66 billion dollars, the sector reaches a share of 68 percent in total in the total export income of the 250 list.

Later, we see the machinery sector, which has started to show a high added value of 1.5 billion dollars in the world markets. When we consider textile and readywear together, we come across approximately 1 billion dollars.

As a result, we see that 91 percent of the 250 large companies' total exports of 11.5 billion dollars in 2019 were realized by these basic sectors. These sectors also constitute 141 companies of the BISO list.

Likewise, employment data indicate that these sectors bear the burden of the urban economy, because they constituted 63 percent of total employment in 2019. Consequently, it is possible to find the highest added value figures in this group.

It is worth underlining that the high added value created by 26 companies representing the food, agriculture and livestock sectors and 4 energy companies is also noteworthy for Bursa. It is also necessary to mention food in terms of contribution to employment along with retail trade.

Bursa Makes It's 5th Leap With TOGG

Bursa is a city that has been producing and marketing since the first years of human civilization.

We see this in the unearthed traces of civilization in archaeological researches.

Before going that long, let me explain the important leaps the city has experienced, starting from 1326, when the Ottomans conquered Bursa, and detail the fifth big leap we are experiencing today.

Conquered by the Ottoman Empire, Bursa was an important silk production center. After the secret of silk was learned from the Chinese, this legacy of the Byzantine period was continued by the Ottoman Empire. Bursa silk has always preserved its reputation in the Ottoman Empire for centuries.

The first leap was achieved with this ancient production. Established in 1888 and operating until our recent history, the Sericulture Institute was the first step in the modernization of production.

The first years of the Republic witnessed investments that made Bursa the leader in textile. Merinos, Sungipek and İpekış factories played a pioneering role, enabling Bursa to take the second leap forward. Under the leadership of these factories, Bursa has become a textile brand.

Bursa, has developed and grown its industrial know-how with an investment that will set an example for the country after 1960. The third leap starting with the establishment of the first organized industrial zone in Turkey provided new investment to Bursa.

The establishment of TOFAŞ and then Oyak Renault factories heralded a new transition. The sector has developed so that it has reached the capacity to export to 193 countries. Automotive meant machinery and heavy industry. With these two sectors, Bursa consolidated its industrial city identity and made the fourth leap forward. We have been experiencing the labor pains of the fifth big leap in recent years. The TEKNOSAB project of the Bursa Chamber of Commerce and Industry was the signal flare that will carry Bursa's industrial journey into the next century.

Then Turkey's domestic and national automobile factory TOGG came. This is not just an arbitrary investment choice. It was an investment that Bursa deservedly received thanks to the knowledge gained in the fourth leap.

This investment like the other leaps, will enable the transformation of Turkey as well as Bursa to take the step into the big league. The 150-year-old automotive industry has now evolved into the concept of mobility with the developing technology. Mobility is the new

name in the automotive industry for digitalization that enters every aspect of our lives.

Conventional manufacturing will now hand over to new tools where things will be used with the internet. The new ecosystem of automotive will evolve with information and entertainment system equipment from interconnected, driverless and shared vehicles controlled by artificial intelligence.

TOGG will take the first step of this new concept with the factory in Gemlik. TOGG will become part of the digital transformation in the world with this manufacturing facility beyond an automobile. Accordingly, the supply industry, which is already number one in conventional production in the world, will also keep up with the transformation.

When we say automotive in Turkey, Bursa comes to

mind. The core of the mobility system that TOGG has created in Gemlik will be remembered with Wolfsburg in Germany and Stuttgart Sindelfingen in Germany, and Turin in Italy, which are the addresses of new technologies in the world. Integration with TEKNOSAB will speed up this process. Gemlik-TEKNOSAB will turn into a technology valley in the very near future.

The "Top 250 Large Companies" research, which sheds light on the city economy prepared for the 23rd time this year by the Bursa Chamber of Commerce and Industry, includes the economic growth reflections created by these leaps. We will see the effects of the fifth leap together in the next 10 years.

BCCI's '**Bursa Grows, Turkey Grows**' will become a reality once again the motto.

Osman GÜRÇAY
Journalist - Writer

Way To Go!

In the 1950s, when Bursa was mentioned, a heaven came to mind with its textile, towel, peach, chestnut, fig, pear, grape, onion, bean, tobacco, fruit and vegetable warehouse, mountain and spa tourism, green nature.

From the beginning of the 1960s, people from the Balkans who were good with technology turned the production, which was carried out with land looms working at homes, into small-scale factories with automatic looms with mechanical infrastructure. In some districts, the sounds of the looms would not be silent until the morning.

Just as no one used to worry about noise, the silence during "programmed power outages" frightened people.

Because at that time, as in every period, money was not growing on trees.

It is not a coincidence that today's leading automotive sector chose Bursa as its base, it is the result of the vehicle manufacturing tradition in its past.

The rotation of the first wheel in Bursa is as old as human history and the masters have added that tradition to the present by adding on what they have seen.

In the early 1970s, two automobile factories were established one after the other, and there were people who scoffed implying that there is an assembly factory, and at first it was indeed

But even the crates in which the parts coming by ships were put to be sold for scrap, creating a sector called wood warehousing in Bursa.

While plywood that swells like balloons with just a drop of water and breaks like a biscuit was produced in Turkey, the 5x10 sized MDF quality boards impregnated with chipboard, which were cleaned and put up for sale in warehouses and used as concrete mold material, were in great demand by the builders.

This process did not last long and factories producing high quality chipboard and MDF and wooden pallet workshops were established.

It is no coincidence that İnegöl, which started off by selling the furniture of Ankara's sites, has become a furniture giant that works for export today.

And then the automotive supplier industry, which accelerated the migration from all provinces to Bursa, was established and grew at an incredible speed.

Today, when we look at the sector leaders of

production, employment, added value, sales and exports in our country, we see the name of Bursa in the top three.

Since we proudly observe the power of Bursa in comparative statistical tables, all of which are prepared with great efforts in this book, I would like to express my ambition not with expert figures but with my feelings. However while performing the motto **"Bursa Grows, Turkey Grows"** Bursa doesn't get the deserved support for the business community and social welfare for the public from growing Turkey.

It should be the expectation of the common urban consciousness to ask that the order that has come like this for 70 years not to continue like this.

Bursa has paid enormous costs while industrializing.

Carrying the pride of Turkey's founding the first OIZ, we were exhausting Bursa with practices such as firstly establishing factories in agricultural fields and then organizing them.

We have just met clean and environmentally friendly

production, but we still could not be friendly.

Since every OIZ requires new employment, the process of receiving immigration has broken all urban planning plans. And now let's be careful...

No Other Bursa!

I wish the business world, which takes its strength from production, saying hope always exists, continues on its way with the same belief after the pandemic.

Especially if we take big steps in the field of agricultural products industry with the lesson we learned from the teachings of the pandemic process!

Go For It!

Expressing that I care very much for BİSİ to work with 250 large companies and make it a tradition, we will be the winner if our common denominator is Bursa's benefit in every step we take with its industrialist, its employees, its institutions, the press, and most importantly, its living.

Yunis Can TOPAKTAŞ
Journalist - Writer

Bursa, City of who see the Future

Turkey, 'which have the advantage of geography in an effort to fully use' and is one of the countries that should not mistake while playing cards in his hand. Bursa, on the other hand, always stands out as a special city with every step taken.

Bursa, Turkey's leading manufacturing center, stands out for being successful, best of all through history, the best quality, and the latest generation.

As we come towards the end of the 2020s, we are now pregnant with the developments in the industry business line that will shape our future. Devices that move with sensors, robots, autonomous cars, drone mobiles, quantum computers, Nano technologies and thousands of other innovations are at our door. Space mining is spoken in developed countries. We still do not know exactly what to do with boron, uranium and thorium...

Decisions Should Be Strategic

If Bursa will continue on its way without losing its leadership position; first of all, it should be very careful while choosing the names at the head of the decision mechanisms and capital. Strengthening its strategic position is not as easy as it seems and thought.

Since our subject is Bursa and "Top 250 Large Organizations"; we need to examine some data and make certain judgments ...

We closed 2019 well, when we started badly and saw the bottom.

The contraction in the economy, which started from the last quarter of last year (2018), continued for 3 quarters and returned to growth from the third quarter of 2019. The average of the contraction lasting for three quarters was 2.2 percent. It was two quarters shorter in duration than in past crisis periods, and the contraction of the economy was about half. In a sense, we went in and out of recession, but unemployment increased.

In the third quarter of 2019, the Gross Domestic Product (GDP) returned to growth with 0.9 percent. We grew 6 percent in the last quarter. The recovery in housing, automotive and consumption together with the increase in loans was effective in the growth. The yearly average took place in the records as 0.9 percent.

BTSO Warned Ankara with Reports

Bursa was one of the leading provinces that felt the impact of growth closely. Private sector's appetite for investment increased a little. Incentives received, fairs visited. The sectorial reports prepared by BTSO President İbrahim Burkay and council members were important in decision making process in Ankara.

Profitability Ratio of Sales (2009-2019)

When I look at the tables, companies with net sales of 33 billion 785 million 078 thousand 575 liras in 2009 pre-tax profits are seen as 1 billion 369 million 562 thousand 925 liras. The profitability rate of sales is 4.05 percent.

When 10 years have passed, I see that the net sales in 2019 reached 164 billion 858 million 226 thousand 900 liras. The profitability rate of companies with pre-tax profits of 8 billion 865 million 539 thousand 410 liras is 5.38 percent....

Profit rate far below expectations after 10 years...

Equity Profitability

Again in the review I targeted for the same years;

The pre-tax profit of the equity, which was 11 billion 159 million 232 thousand 372 TL in 2009, is 1 billion 369 million 562 thousand 925 TL, corresponding to 12.27 percent.

Total equity of 250 companies in 2019 40 Although it rose to billion 805 million 963 thousand 676 TL, the profitability rate was 8 billion 865 million 539 thousand 410 TL before tax with 21.73 percent. The fact that the profit percentage remained at 21.73 percent after 10 years despite the increase in equity by almost 400 percent shows that companies are struggling to survive.

2019 Performance of 250 Companies

Wood-Forest Products (6), Environment and Recycling (3), Cement (4), Finance (2), Electricity (1), Energy (4), Food-Agriculture and Livestock (26), Ready-to-Wear (8) In Service and Education (4), Construction (4), Chemistry (4), Logistics (2), Machinery (16), Metal (14), Automotive Main Industry (4), Automotive Sub-industry (67), Retail (22)), In Plastic (6), In Health (1),

In Textile (50), and in Tourism (50) companies consist of "250 large firms" list. According to the research; net sales 164 billion 858 million 226 thousand 900 TL.

Profit before tax: 8 billion 865 million 539 thousand 410 TL.

Exports: 11 billion 521 million 829 thousand 976 Dollars

The number of employees they employ: 151 thousand 741 people

Sales from production: 118 billion 444 million 954 thousand 567 TL

According to the information I got from the tables; Bursa will continue to be remembered with the automotive, food, textile, machinery and metal sectors.

The Power of the New Wave

The actors of the economy spent 2019 struggling, finding new financial resources, and supporting producers. We need very serious steps to be taken in software and informatics, which will mark the future of Bursa. Micro mechanics field should not be left blank either.

Research and development comes first. For this, it is time to focus on innovations in education, depth and business people. Taking small steps means preparing for big steps. The key to coming from the bottom is believing...
